

TEST SYSTEM ARCHITECTURES USING ADVANCED STANDARDIZED TEST LANGUAGES

Axel Rennoch

InSTA 2016, Chicago, 10th April 2016

CONTENTS

- **Introduction**
- **Advanced standardized test languages**
 - TTCN-3
 - UML testing profile
 - TDL
- **Test Automation Architecture**
- **Conclusions**

AXEL RENNOCH

- Researcher at Fraunhofer FOKUS in Berlin, Germany
- User of standardized Modelling and Test languages
 - LOTOS, SDL/UML
 - Tree and Tabular Combined notation (TTCN-1&2)
- TTCN-3 user from the beginning
 - Developer for ETSI, 3GPP and industry
 - Trainer and consultant
 - Research projects and evolution team

MOTIVATION

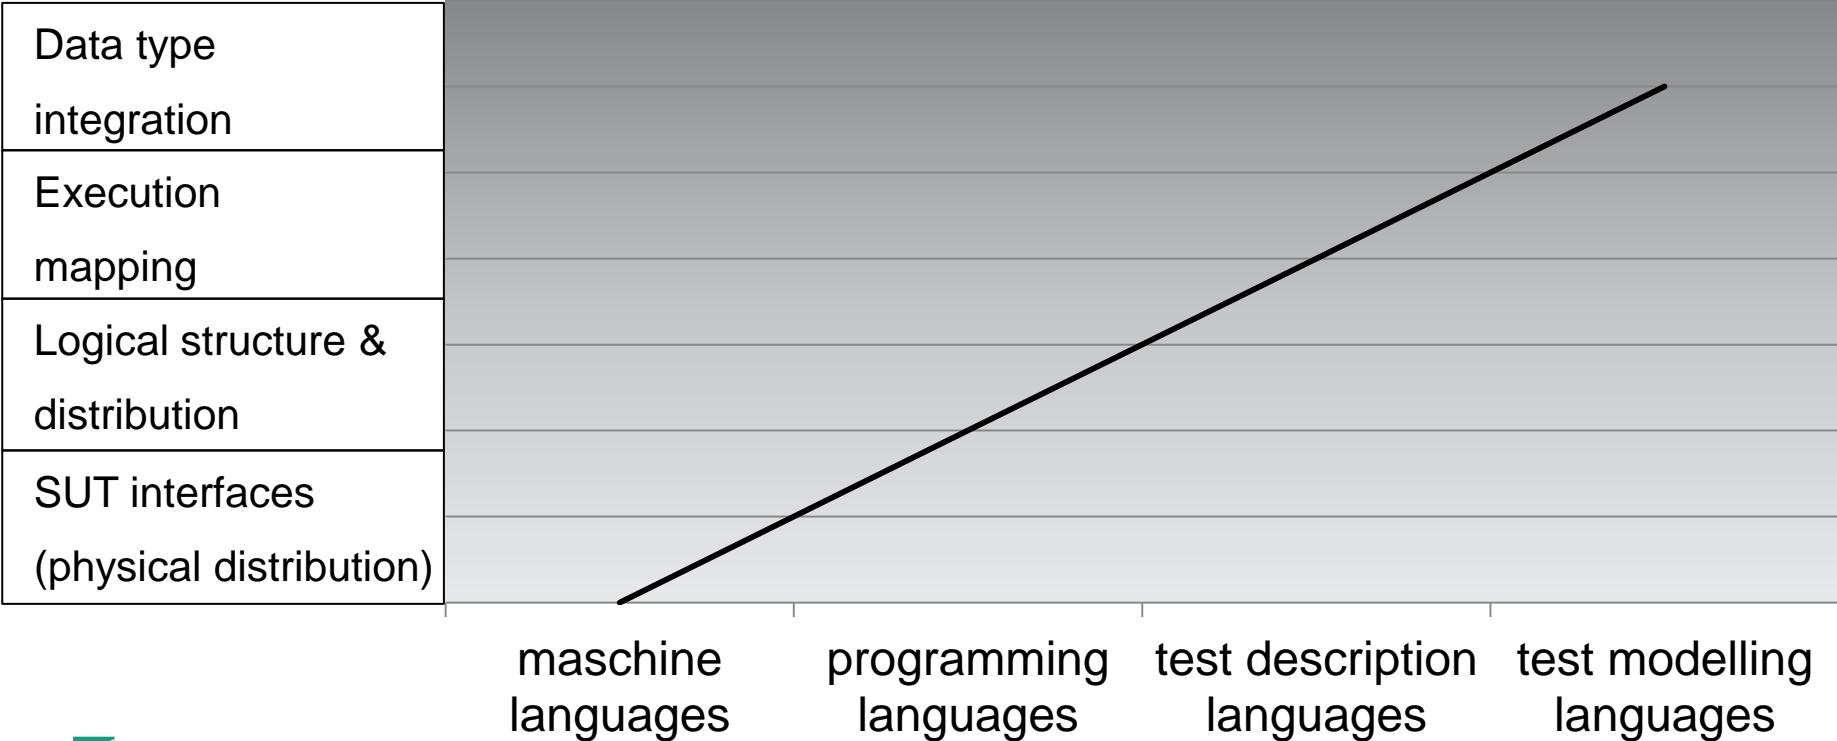

InSTA 2015:

- Keynote by **Sigrid Eldh** on
 - **Software Test Architecture**
 - definition & aspects

InSTA 2016:

- Continuation on **Advanced Standardized Test Languages** for
 - **Test System Architecture**
 - means & examples, user perspective

CHALLENGES FOR TEST SYSTEMS

SOME INITIAL QUESTIONS FOR TEST DEVELOPERS

- Identify SUT access interface points
- Test objectives: functional, load, security?
- Target :
 - standardization body (more abstraction, top down) or
 - in-house test solution (address concrete tools, bottom up)
- Parallel test components (scalability?)
- Coordination & synchronization (existing frameworks?)

CONTENTS

- **Introduction**
- **Advanced standardized test languages**
 - **TTCN-3**
 - UML testing profile
 - TDL
- **Test Automation Architecture**
- **Conclusions**

WHAT IS TTCN-3?

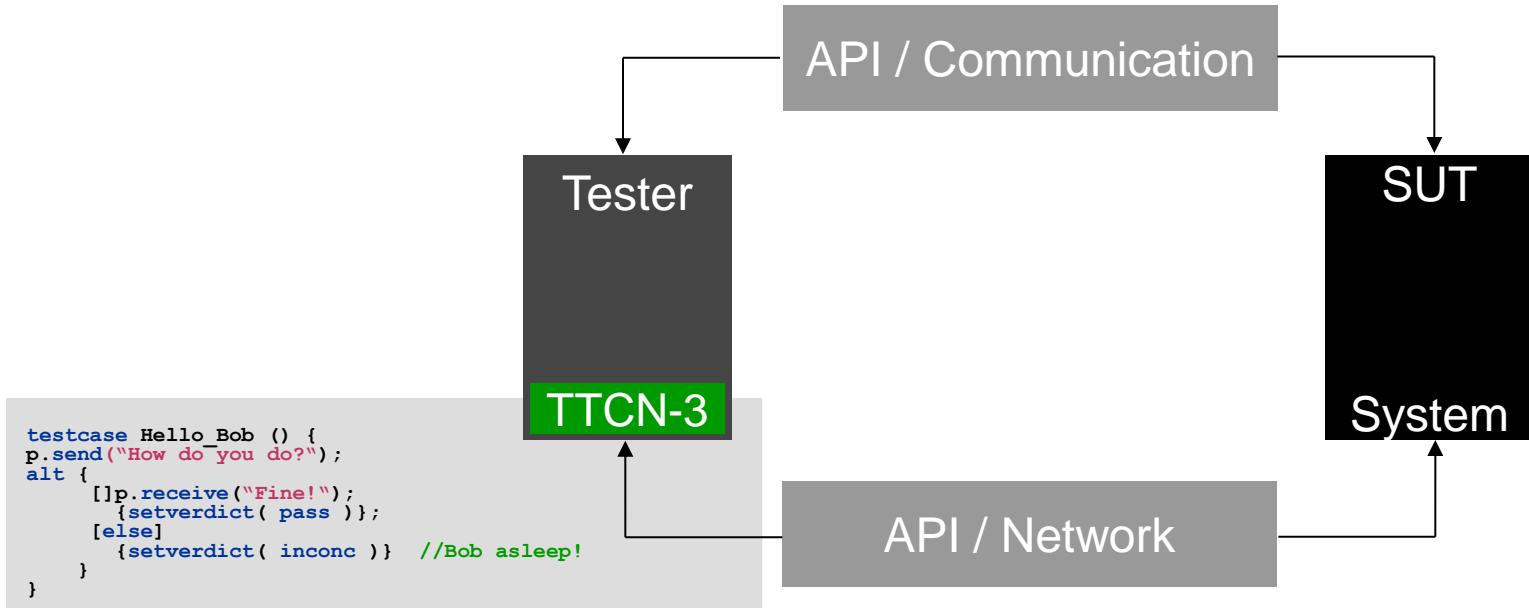

- Testing and Test Control Notation
- Internationally standardized testing language for formally defining test scenarios. Designed purely for testing

```
testcase Hello_Bob () {
    p.send("How do you do?");
    alt {
        []p.receive("Fine!");
            {setverdict( pass )};
        [else]
            {setverdict( inconc )} //Bob asleep!
    }
}
```

IDEA & DESIGN PRINCIPLES OF TTCN-3

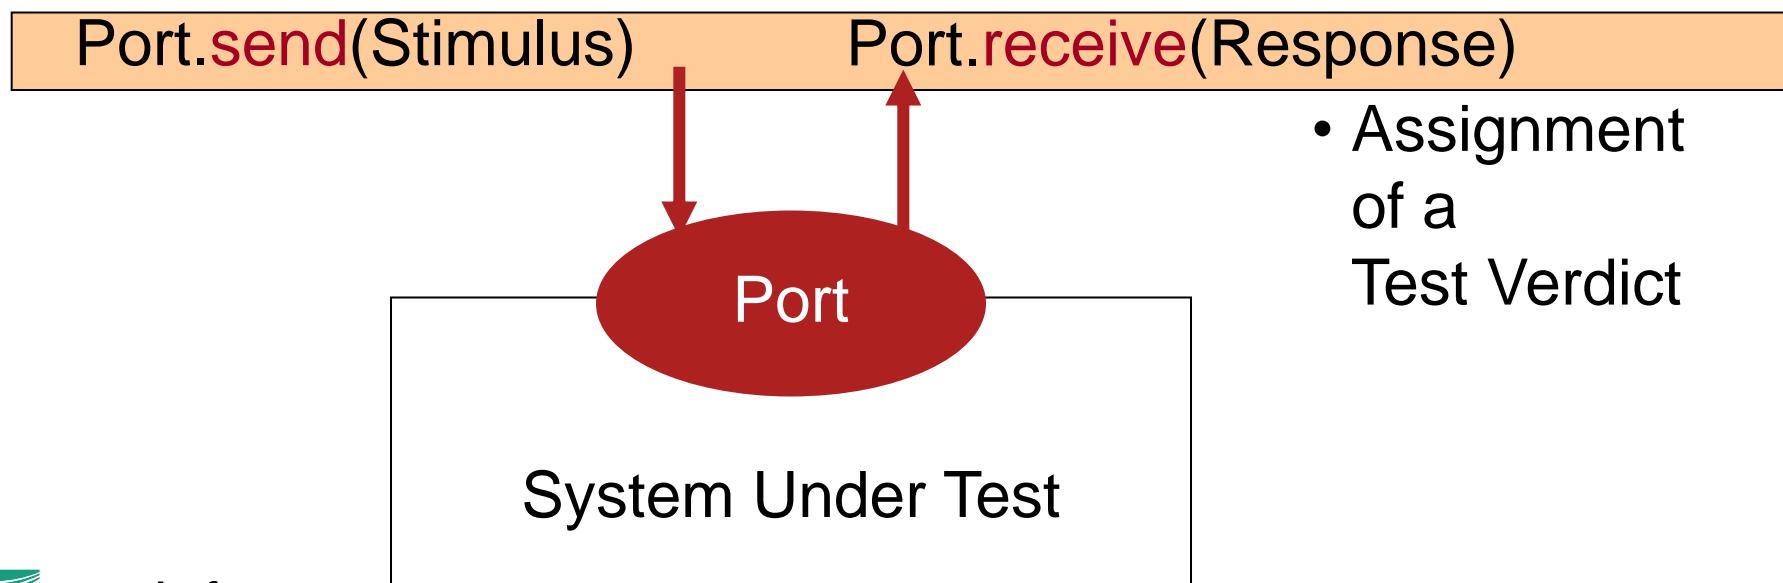

- One test technology for different tests
 - Distributed, platform-independent testing
 - Integrated graphical test development,
-documentation and –analysis
 - Adaptable, open test environment
- Areas of Testing
 - Regression Testing
 - Conformance and Functionality Testing
 - Interoperability and Integration Testing
 - Load/ Stress Testing

TTCN-3 EXECUTION

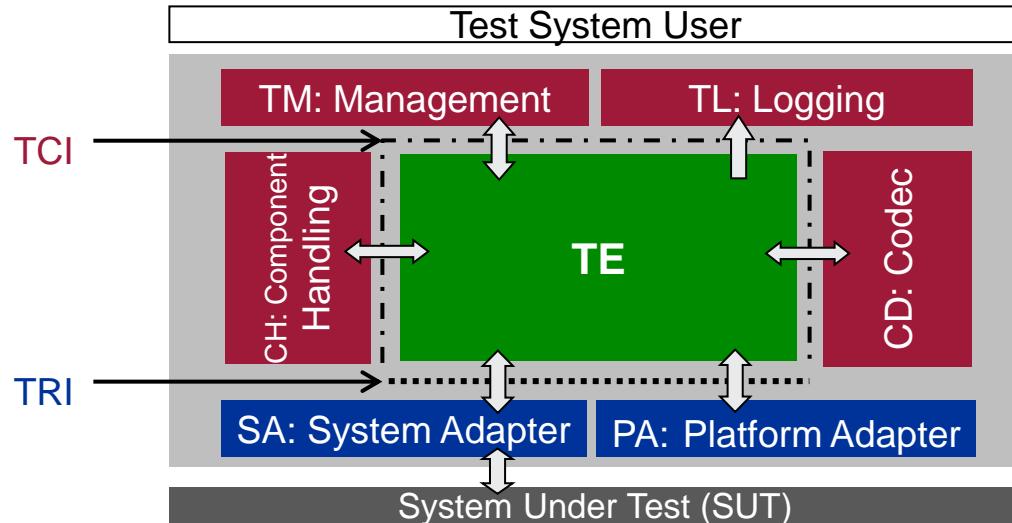

TTCN-3 IS DESIGNED FOR BLACK-BOX TESTING

TTCN-3 Test Case

A TTCN-3 TEST SYSTEM

ETSI ES 201 873-1 TTCN-3 Core Language (CL)

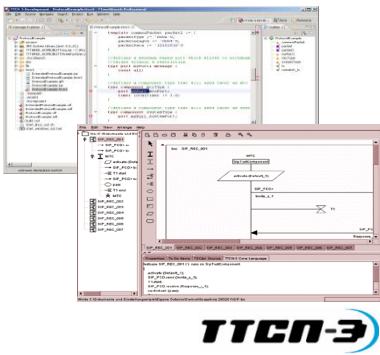

ETSI ES 201 873-5 TTCN-3 Runtime Interface (TRI)

ETSI ES 201 873-6 TTCN-3 Control Interfaces (TCI)

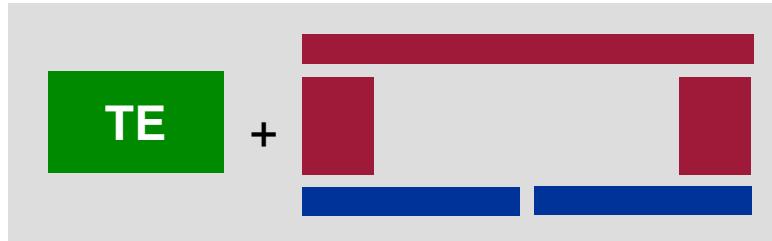

- TE – TTCN-3 Executable
- TM – Test Management
- TL – Test Logging
- CD – Codec
- CH – Component Handling
- SA – System Adapter
- PA – Platform Adapter
- SUT – System Under Test

IMPLEMENTATION

ATS

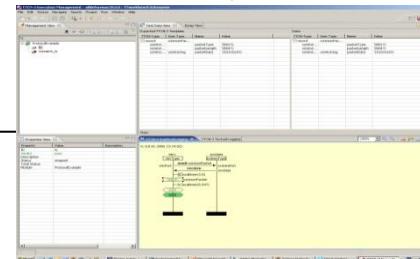

Test System

SUT

Communication

MAJOR LANGUAGE ELEMENTS OF TTCN-3 NOTATION

module definitions	
Imports	Importing definitions from other modules defined in TTCN-3 or other languages
Data Types	User defined data types (messages, PDUs, information elements, ...)
Test Data	Test data transmitted/expected during test execution (templates, values)
Test Configuration	Definition of the test components and communication ports
Test Behavior	Specification of the dynamic test behavior

TTCN-3 DOMAINS: TELECOM

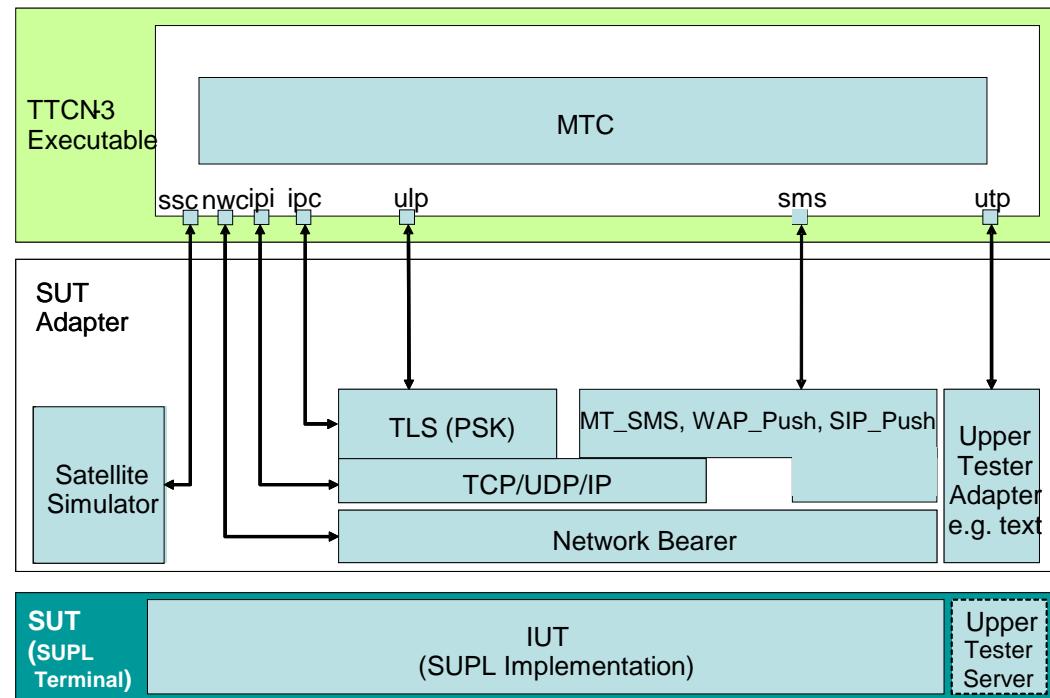

- Industrial use
 - Big companies with hundreds of TTCN-3 engineers: Ericsson, Nokia, Siemens, Motorola
 - large distribution among SME
- Standardization bodies
 - standardized test suites:
ETSI / 3GPP (**LTE!**) / OMA / TETRA and its members
 - IMS performance benchmark project:
Intel, HP, BT, FOKUS and others
- Test tool manufacturer:
 - Commercial Tektronix, Catapult, Nexus, R&S, Spirent, ...
- Certification program based on TTCN-3: e.g. WiMax forum

TEST SYSTEM EXAMPLE 1: OMA SUPL

Secure UserPlane Location Protocol

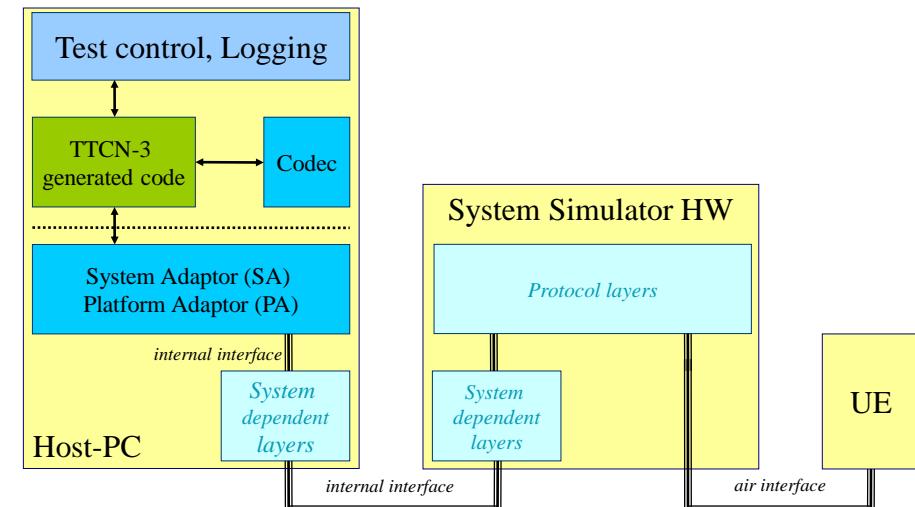

Single MTC controls e.g.:

- UlpPort (Lup interface)
- IpcPort (IP configuration)
- smsPort used for SMS
- UtpPort for upper tester commands
- IpiPort (IP information, e.g. release)
- NwcPort: network bearer control, e.g. handover trigger
- SscPort: satellite simulation control, e.g. scenario trigger

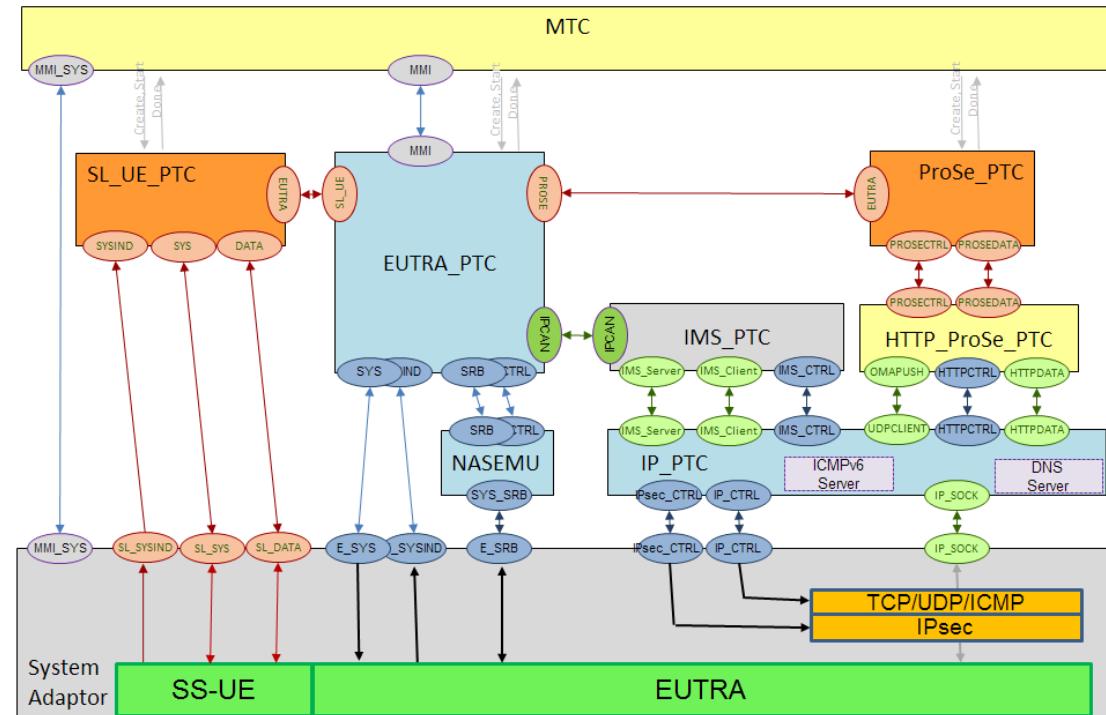

TEST SYSTEM EXAMPLE 2: 3GPP UE TESTING

- **E-UTRAN (LTE air interface):** 3GPP TS 36.523-3 V12.4.0 (2015-12)
- **Each radio access technology (RAT) is hosted by a separate TTCN-3 parallel component:** E-UTRAN, UTRAN, GERAN, others.
- **PTCs are controlled by the TTCN-3 main test component (MTC) which:**
 - is independent from the RAT;
 - may host the upper tester for MMI and AT commands;

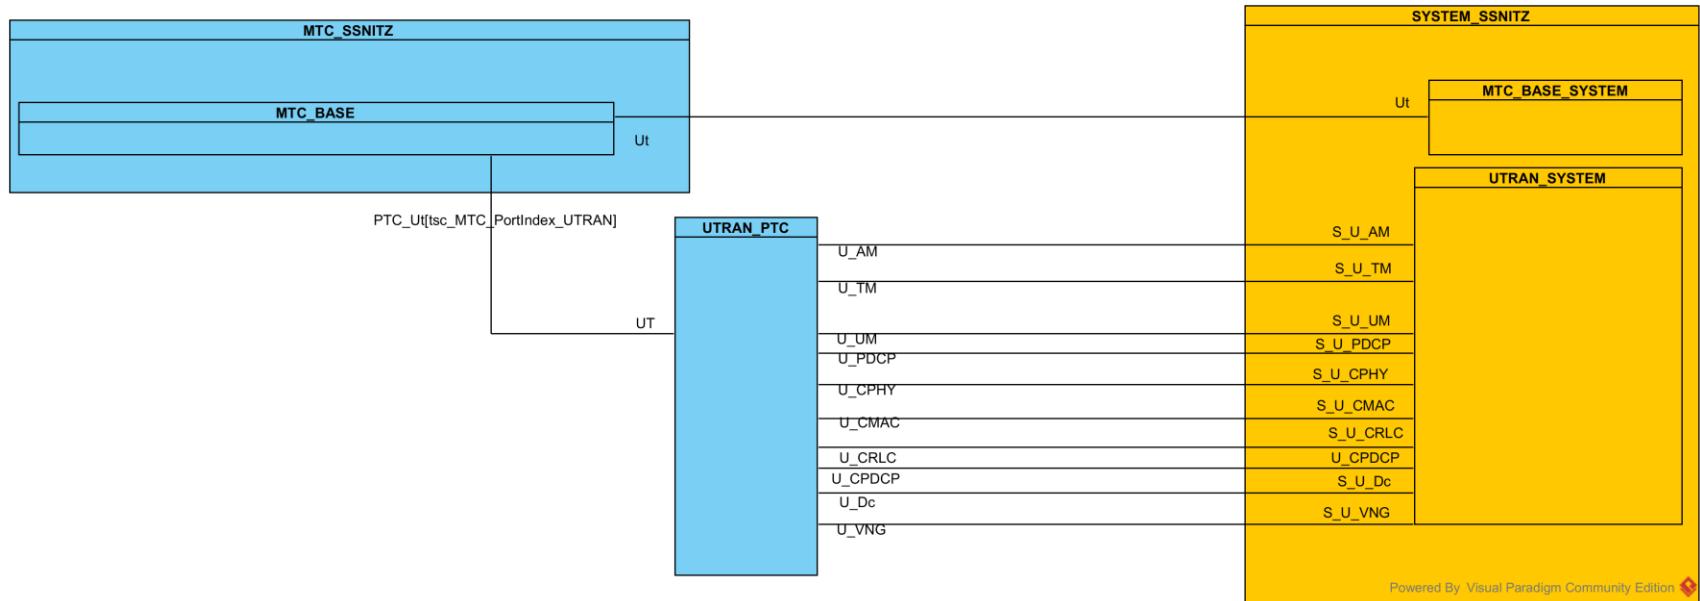

TEST SYSTEM EXAMPLE 2: 3GPP UE TESTING

- Multiple of configurations
- Several PTCs
 - Cooperating
 - Communicating

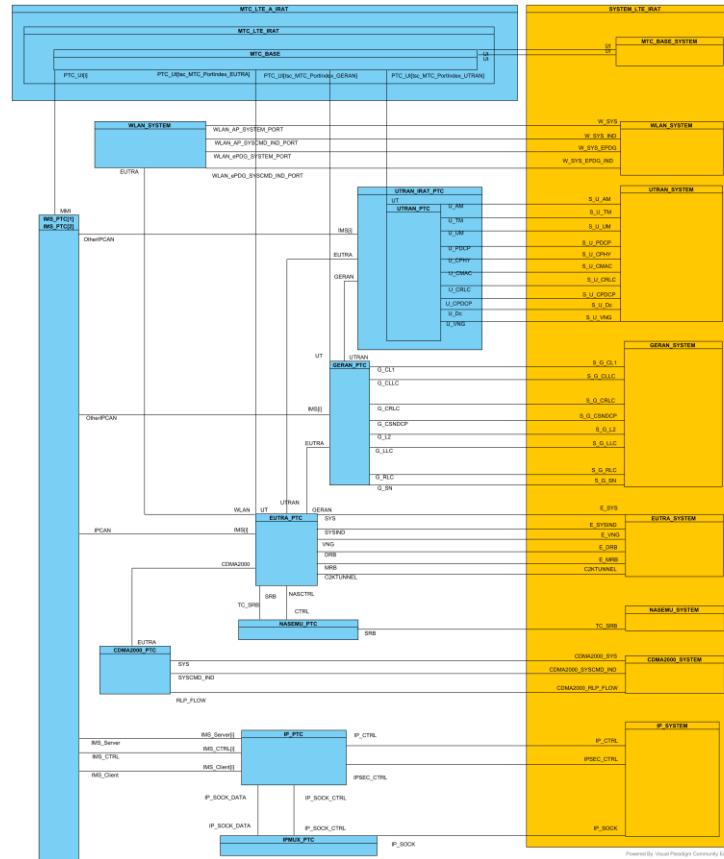

TEST SYSTEM EXAMPLE 2: 3GPP UE TESTING

- Simple scenario
- Reuse of nested component types for MTC, PTCs and TSI

TEST SYSTEM EXAMPLE 2: 3GPP UE TESTING

- More complex configuration
 - Nested component types
 - Illustration using Visual Paradigm

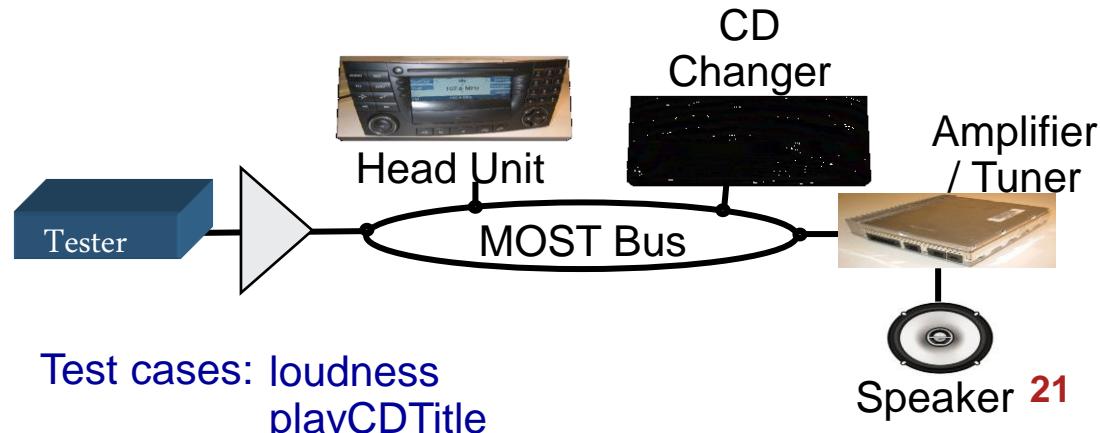

TTCN-3 DOMAINS: AUTOMOTIVE

- Car communication systems
 - Daimler, Volkswagen, SiemensVDO
 - edutainment bus system (test suite)
- Standardization groups:
 - AUTOSAR consortium
 - MOST cooperation
- Car-to-car communication

Telematics Applications in the Cockpit

- Audio (CD / Radio), Video
- Telephone, SMS
- Navigation
- Speech recognition
- User interface for body electronic

TTCN-3 DOMAINS: MEDICINE

Medicine

- SiemensMED (image processing)
- HL7 eHealth protocols (Interoperability)

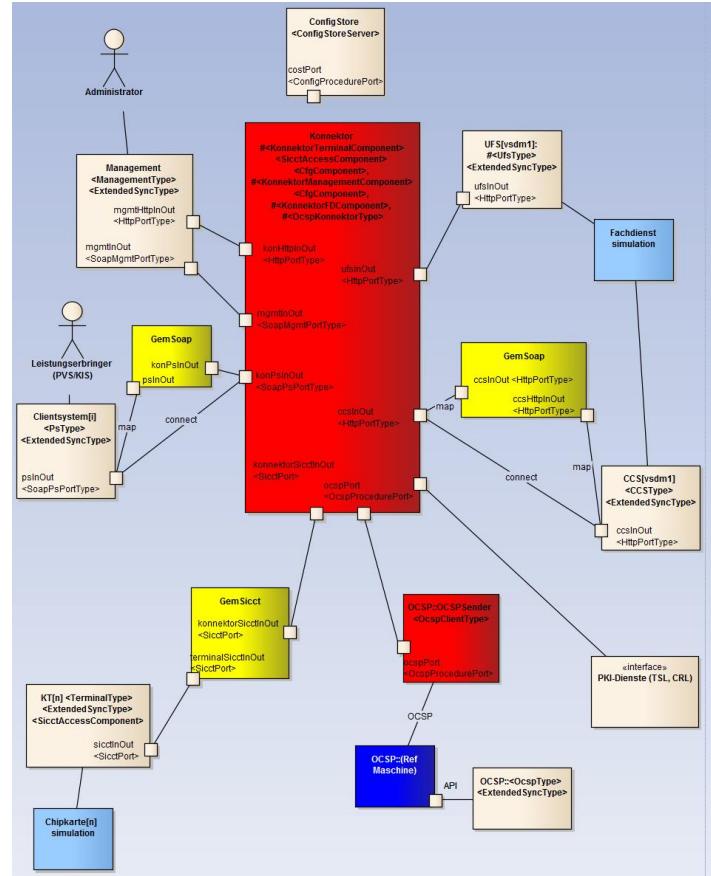

Upcoming E-Health infrastructure for Germany

- High security requirements (e.g. certificates, cryptography)
- Test development prior to SUT availability
- Multiple heterogenous interfaces:
 - cardterminals,, card simulations,
 - Webservices, OCSP server etc.

TEST SYSTEM EXAMPLE 3: E-HEALTH “KONNEKTOR”

- Complex configuration
- Illustration using IBM Rational Enterprise Architect:
 - PTC,
 - simulators,
 - SUT (mock),
 - real server,
 - adaptation code

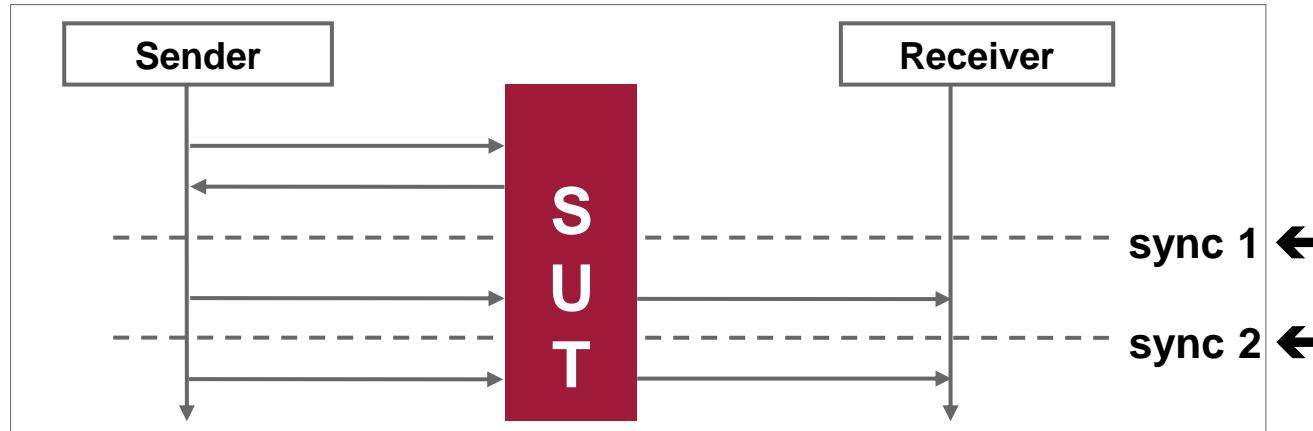

ETSI FRAMEWORK FOR SYNCHRONISATION

- **Source** STF 276 (IPv6 project)
- Set of **TTCN-3 functions** to e.g.
 - Start and control parallel components
 - Exchange synchronization signals between components
- Set of **charstring constants** for **synchronization points**
 - *preambleDone, sync1, sync2*
 - *testbodyDone*
- **Predefined timers** e.g. to avoid deadlocks at synchronization points
- <http://www.ttcn-3.org/index.php/development/devlibraries/devlib-libcommon>

SYNCHRONIZATION SAMPLES

- Synchronization occurs between parallel TTCN-3 components (using signals via MTC)

- Sync 1 ensures the completion of senders procedure
- Sync 2 confirms the arrival of a message at receivers side

MODULE IMPORT „LAYERING“

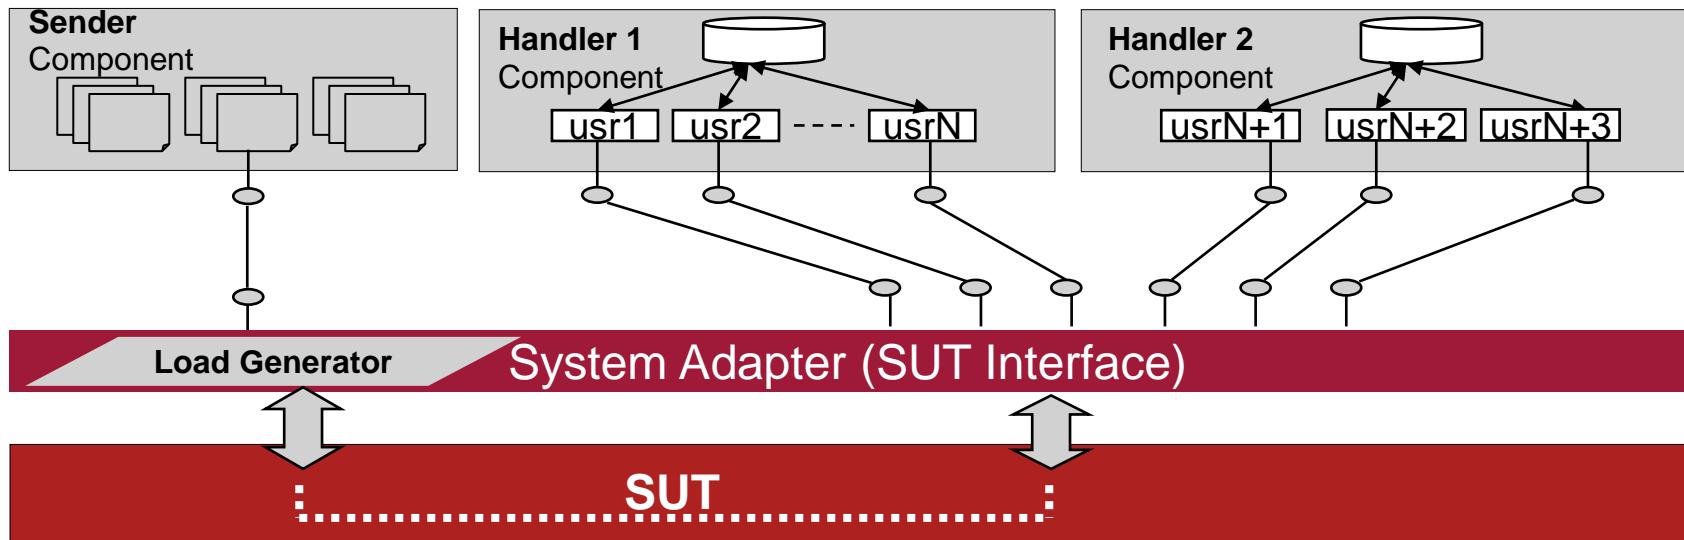

- Test suite specific code
 - testcase, test (component) functions
- Test suite specific library
 - Component types, test configuration, pre/postamble
- Interface/protocol specific library
 - SIP, DNS, IPv6 etc.
- Interface/protocol independent library
 - synchronizaton

high level:
(low
reusability)

Low level:
(High
reusability)

EXAMPLE 4: IMS BENCHMARK TEST CONFIGURATION

- 400 subscribers per component **Handler**
- Component **Sender** initializes/provides data requests for load-generator
- 5.000 - 10.000 IMS subscribers (per server)
- Up to 250 requests per second (per server)

LESSONS LEARNED WITH TTCN-3

- **Study access interface points (Test System Interface)**
 - Available Test solution plugins?
- **Test objectives: functional, load, security?**
 - Consider synchronization overhead (e.g. ETSI's LibCommon)
 - Consider performance issues (e.g. encoded data preparation)
- **Concurrent test components with separated traces & verdicts (easier failure analysis)**
 - Consider test tool logging functions
- **Improve decomposition using libraries for**
 - handling single interface types
 - Nested component types (to be extended)
- **Use modelling tools for the illustration of the TTCN-3 architecture**

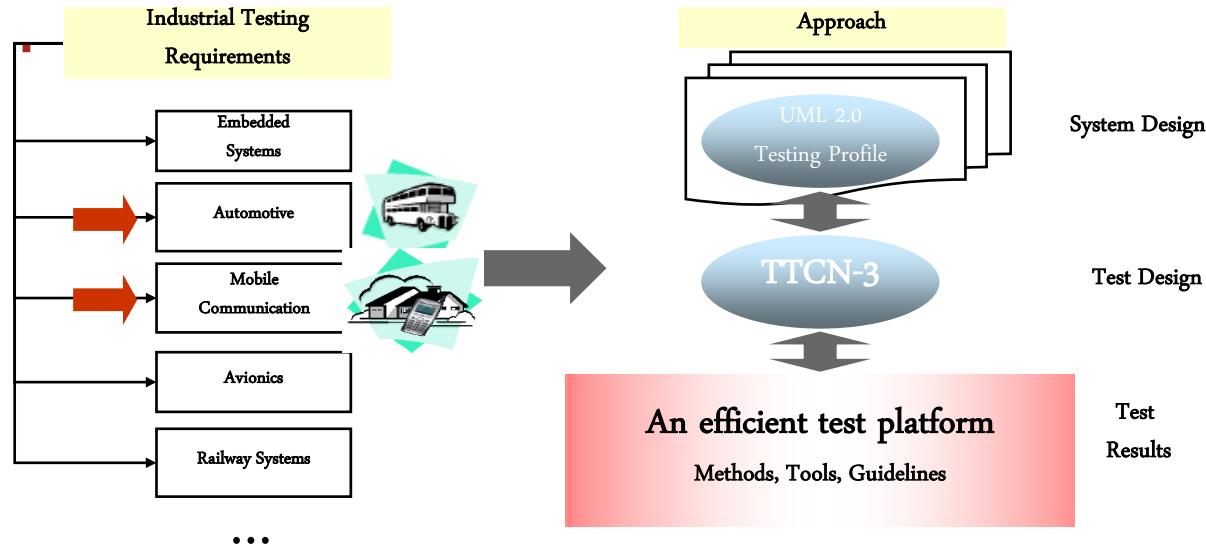

BEYOND TTCN-3: MBT

- TTCN-3 is used in several domains as binding link between modelling and execution
- Commercial tools do generate TTCN-3 code for test execution
 - lots of academic prototype tools
- Selection of industrial case studies:
 - e.g. European MIDAS project
 - pilots in SOA testing automation (*later*)

TTCN-3 LINK TO UTP

Objective:

- To develop an efficient **test platform** fulfilling **industrial testing requirements**
- To **execute high-level test models**, e.g. UML testing profile

CONTENTS

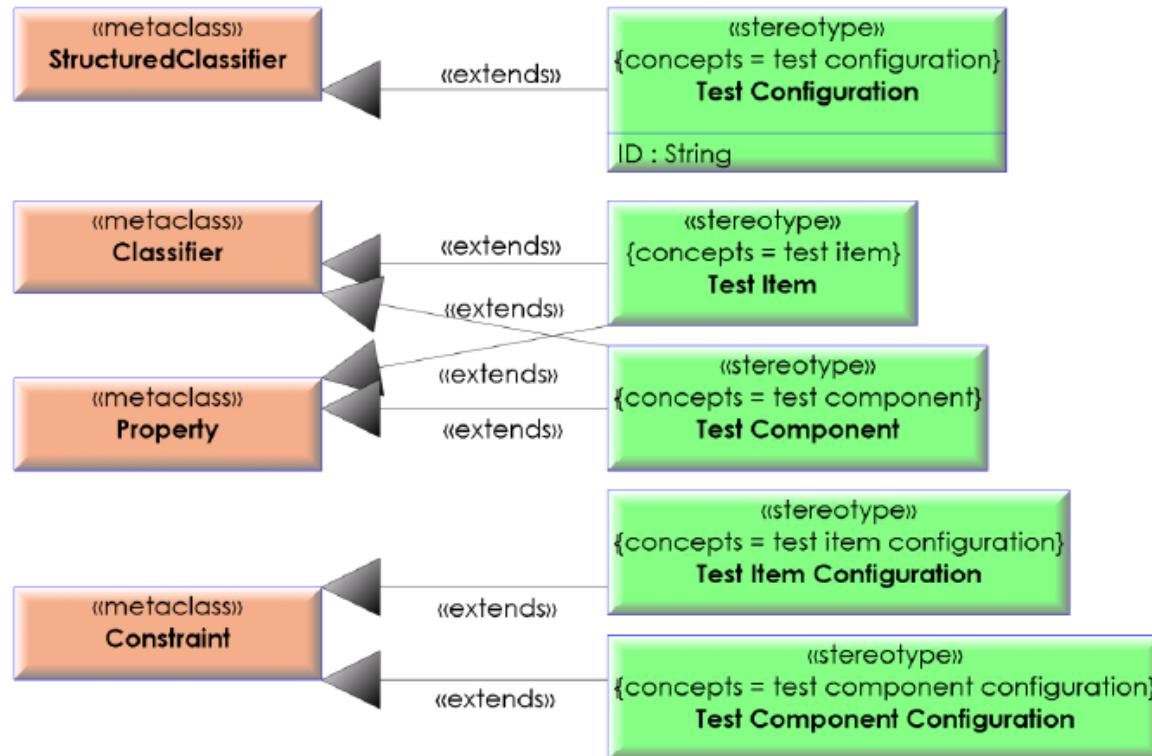

- **Introduction**
- **Advanced standardized test languages**
 - TTCN-3
 - **UML testing profile**
 - TDL
- **Test Automation Architecture**
- **Conclusions**

UML TESTING PROFILE (UTP)

- Standard by the Object Management Group:
Version 1.0 (2004), current version 1.2 (2013), revised draft version 2.0 (Nov 2015)
- Profile of UML version 2:
Industrial standard for (graphical) modeling of Test architectures, behavior and data.
- Conceptual Model:
Test context, cases, objectives, data, configuration, arbitration&verdicts, logs
- UTP library:
predefined types and values (e.g. ISO 25010 Quality model, ISTQB Test levels)
- Extras:
Mapping to TTCN-3 (**procedure-based communication only**)

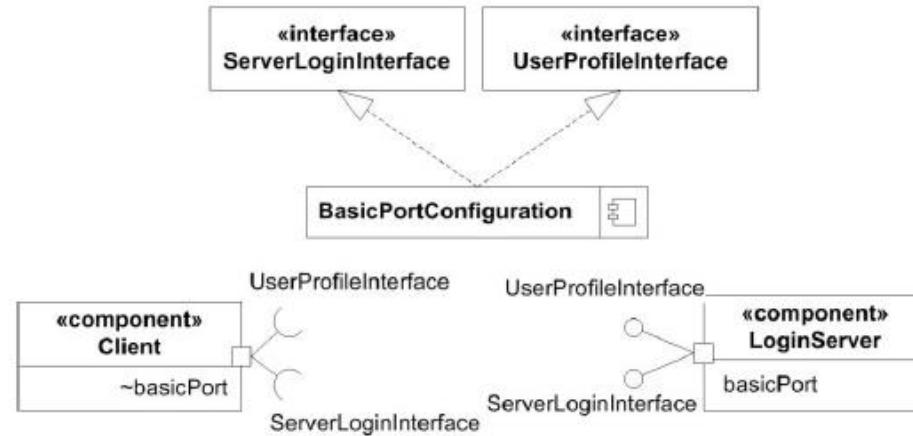

TEST CONFIGURATION OVERVIEW

- Standardized mapping of UTP stereotypes to UML metaclasses

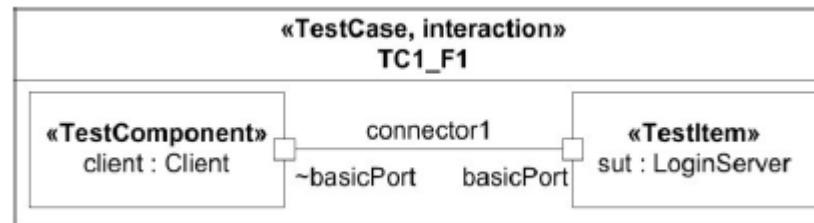

UTP TEST CONFIGURATION EXAMPLE (UTP 2.0 ONLY!)

- LoginServer test components

- LoginServer test configuration

UTP MAJOR USE

- **Domain-independent test modeling for dynamic testing** approaches:
 - Test environments, test configurations, test case specifications (including test case derivation), test data specifications/values
- Test evaluation, i.e., managing and visualization of test results
- Integration of best practices
such as keyword-driven testing, equivalence class testing, etc.
- Combination with other UML profiles (e.g., SysML, MARTE, SoaML)
 - E.g. to achieve requirements traceability, ...

LESSONS LEARNED WITH UTP

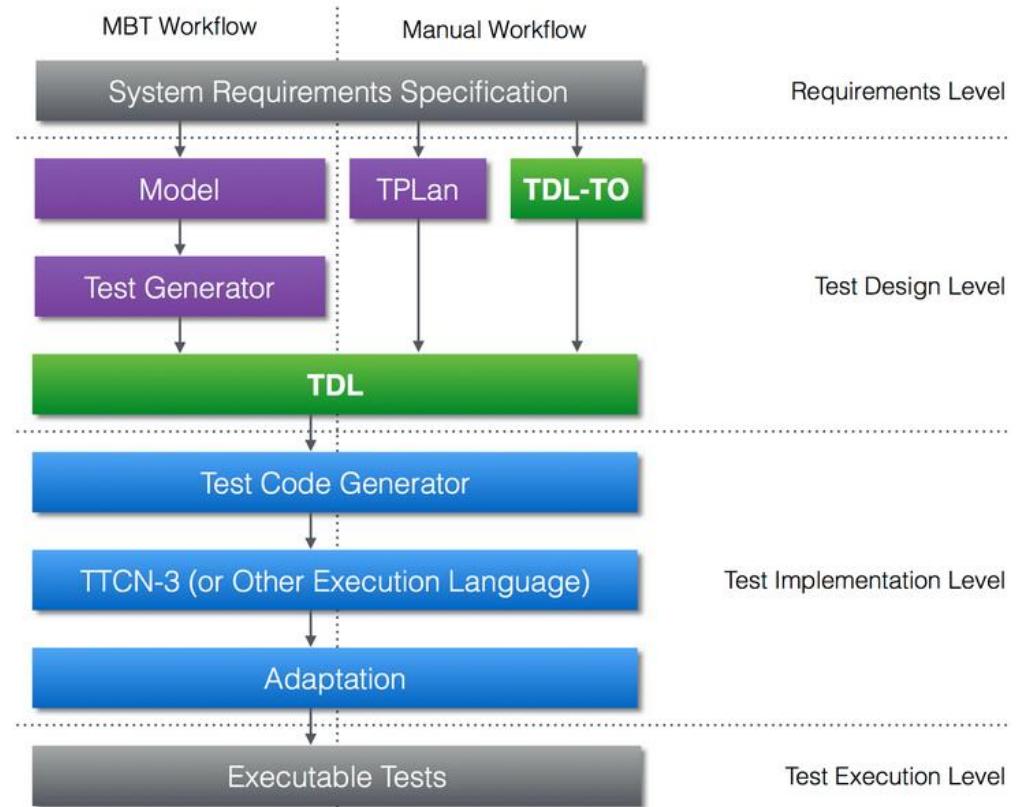

- **Current version 1.2**
 - less industrial use since version 1.0 ten years ago
 - No big test suites
 - Only some tooling
- **UTP Revision 2.0 is promising**
 - E.g. covers test configuration

CONTENTS

- **Introduction**
- **Advanced standardized test languages**
 - TTCN-3
 - UML testing profile
 - **TDL**
- **Test Automation Architecture**
- **Conclusions**

TEST DESCRIPTION LANGUAGE

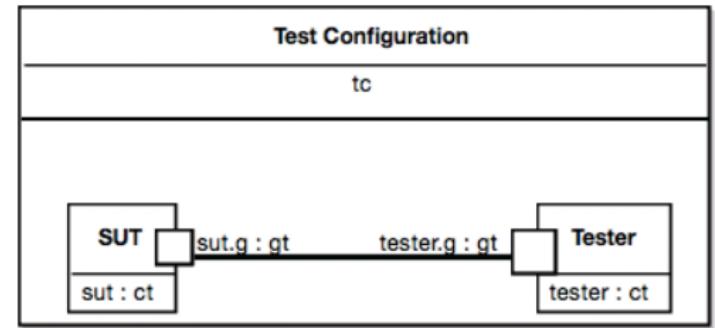

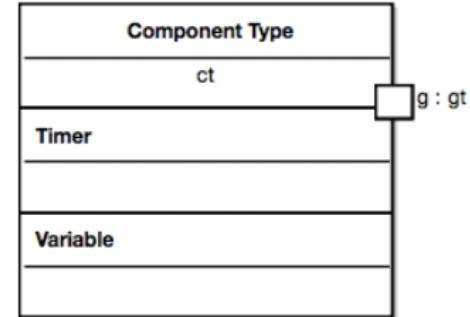

- New ETSI Standard
ES 203 119-1 (V1.2.0, 2015-04)
- Fills gap between the high-level test purposes and TTCN-3
- Simple Text notation with graphical presentation

TDL TEST CONFIGURATION

- Typed components and gates
- Timers and variables
- connections among gates
- component roles

```
Gate Type gt accepts Login, Response;  
  
Component Type ct having {  
    gate g of type gt;  
}  
  
Test Configuration tc {  
    create Tester tester of type ct;  
    create SUT sut of type ct;  
    connect tester.g to sut.g;  
}
```

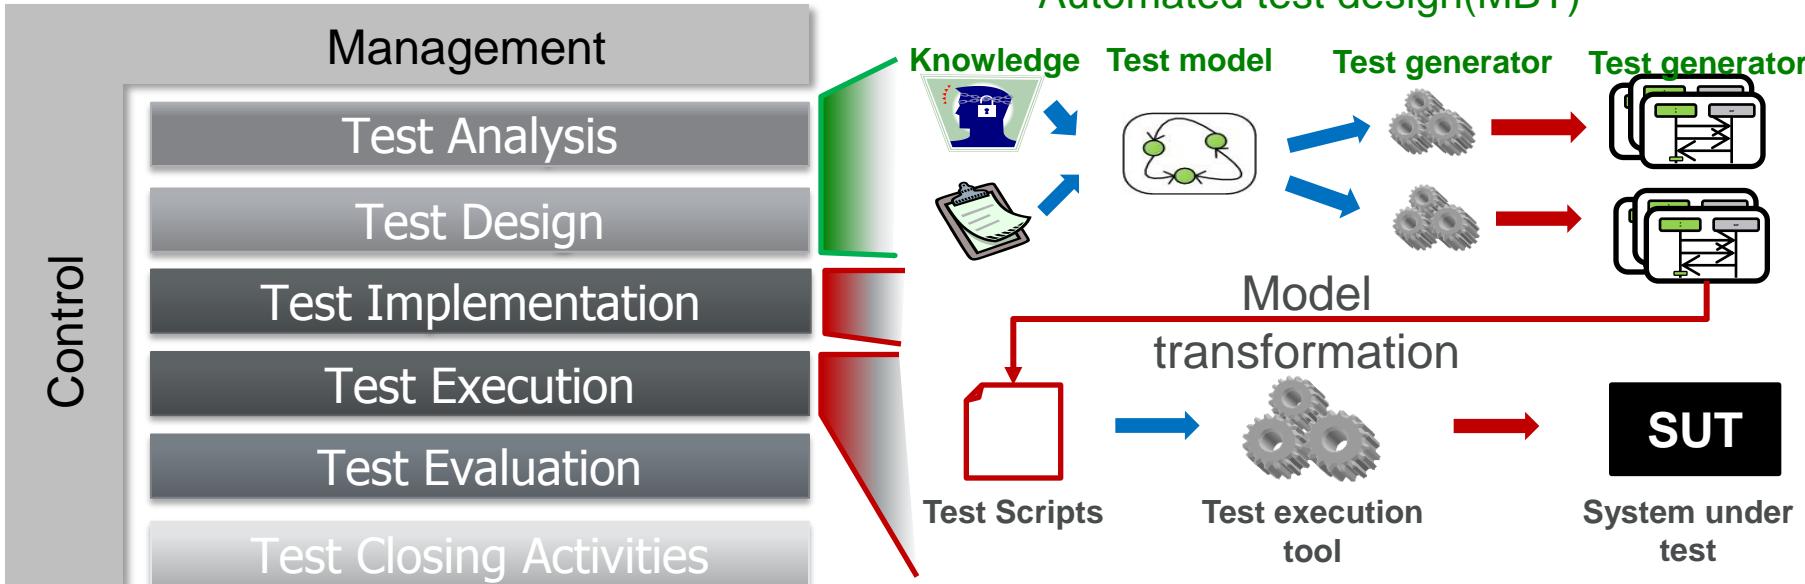

LESSONS LEARNED WITH TDL

- Pure testing view
- Compromise between UTP and TTCN-3
 - Simple
 - Executable
- Not ready to use

CONTENTS

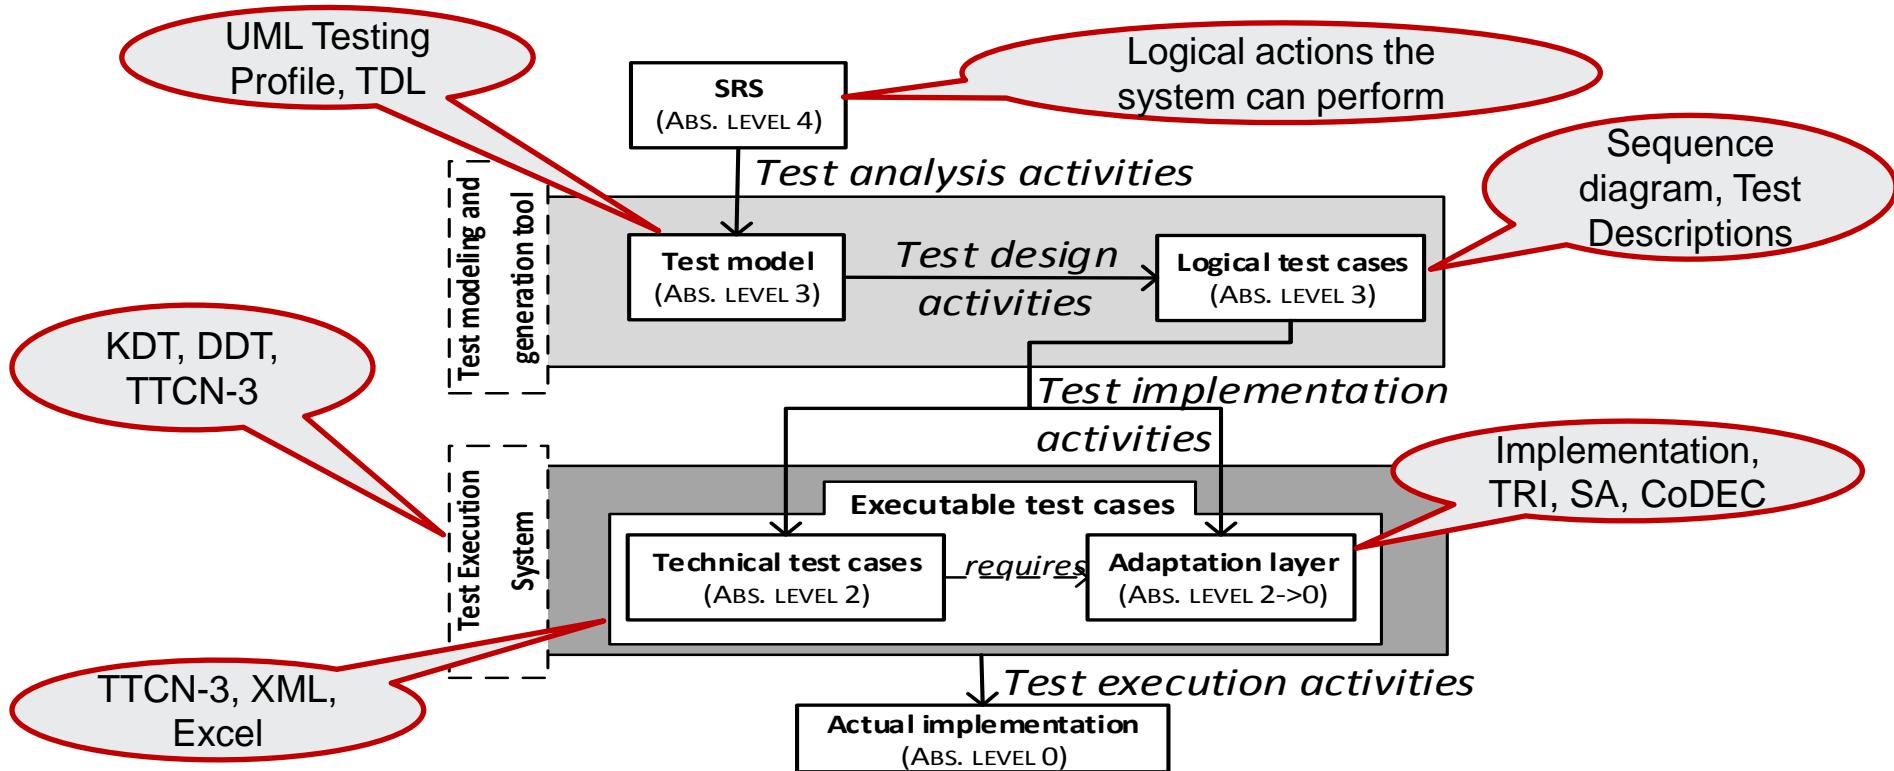

- **Introduction**
- **Advanced standardized test languages**
 - TTCN-3
 - UML testing profile
 - TDL
- **Test Automation Architecture**
- **Conclusions**

THE ISTQB FUNDAMENTAL TEST PROCESS

Automated test execution is state of the practice (if ever) in industry

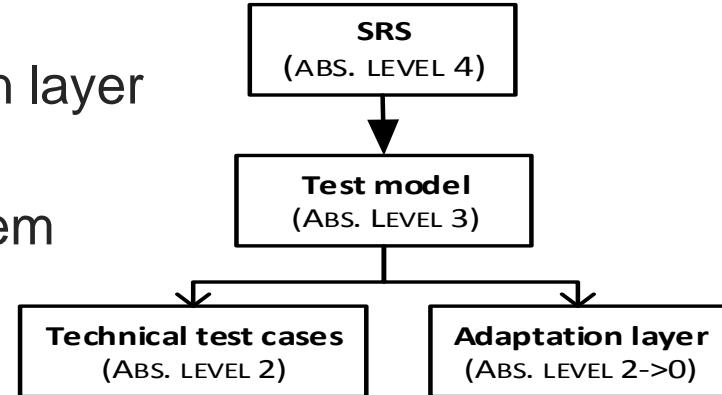

ABSTRACTION LEVELS IN TEST AUTOMATION

TOP-DOWN APPROACH

Model is master

- Test design independent from adaptation layer or test execution system
- No constraint on the test execution system
- Often used in academic prototypes

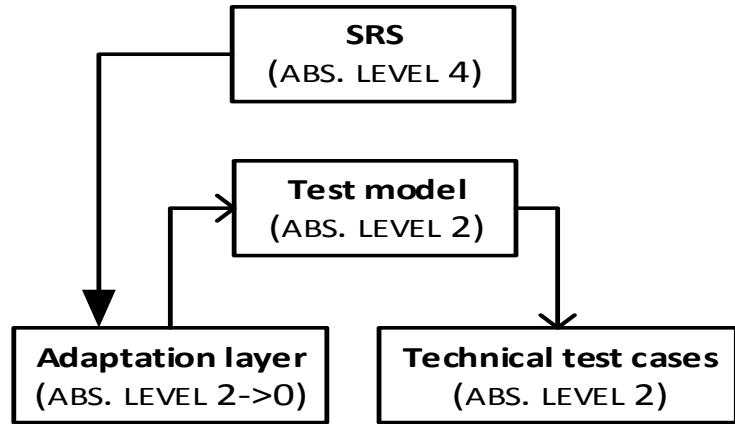

Recommendation

Feasible for *proof-of-concepts*,
limited use for industry

BOTTOM-UP APPROACH

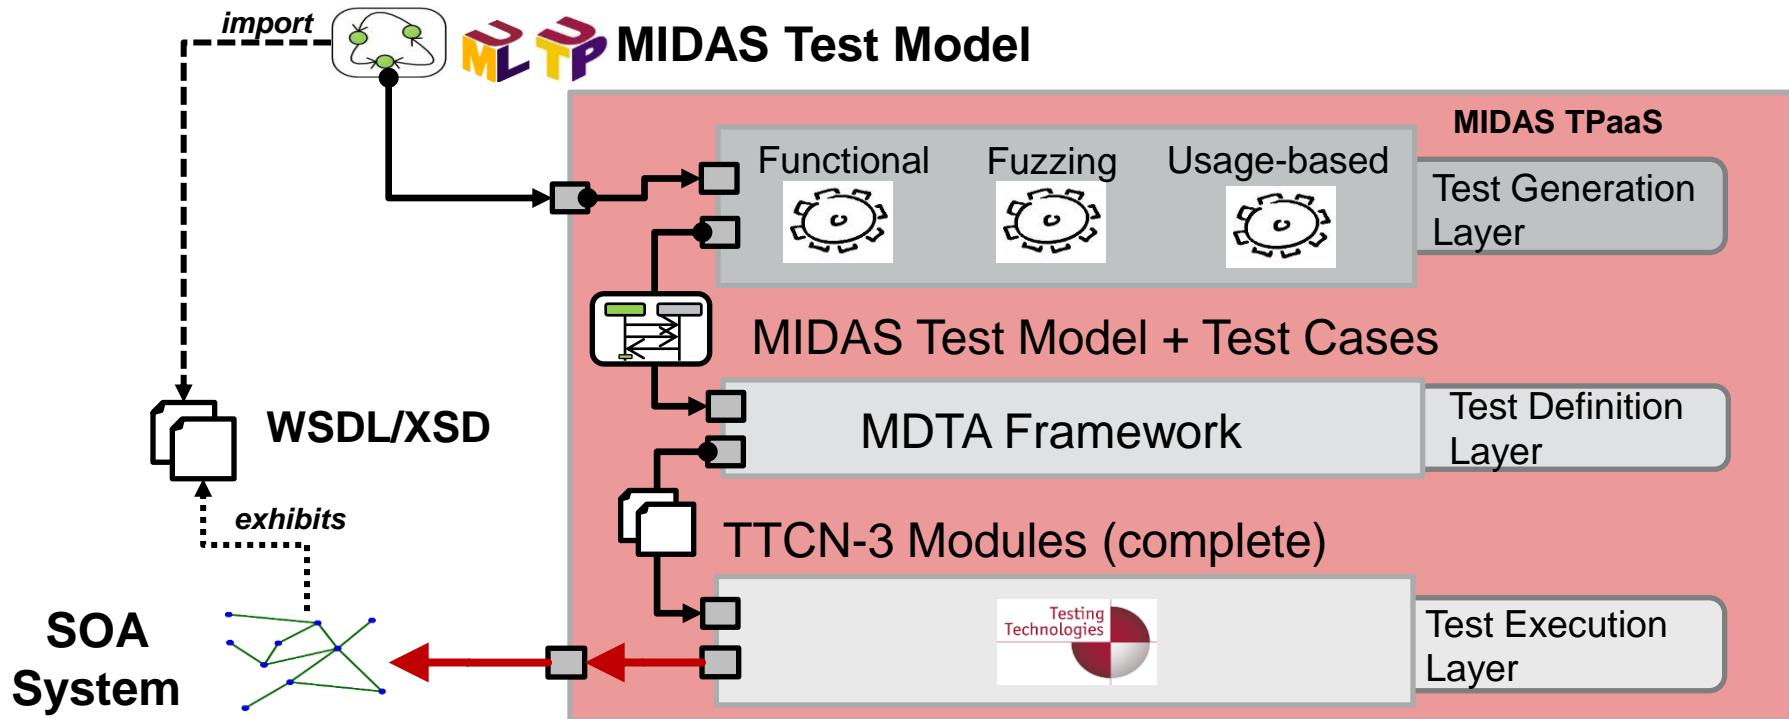

Adaptation layer is master

- Ensures immediate automated test execution
- **Requires** available adaption layer
- Test model derived from the adaption layer

Recommendation
*Only if adaptation layer is
clear for test developers*

TEST AUTOMATION ARCHITECTURE: MIDAS

LESSONS LEARNT FROM TEST AUTOMATION ARCHITECTURE

- Two approaches have been shown
- Bottom-up approach was realized in MIDAS
- **Integration of data types** (e.g. WSDL) is challenging
- (Initial) engineering effort can be quite high

- **Conclusions**

SUMMARY: OVERVIEW

	TTCN-3	UTP	TDL
Standardization body	ETSI, ITU-T	OMG	ETSI
History	Since 1992	Since 2004	Since 2014
Applicability	All domains and testing types	All domains	Conformance, interop
Execution tools and solutions	+	<i>proprietary via C-unit</i>	TTCN-3 mapping <i>in preparation</i>
Current user groups	Industry, Research	Academic, Research	n/a

SUMMARY: TEST ARCHITECTURE

	TTCN-3	UTP 2	TDL
Component extension	+	UML generalization	- (<i>reuse elements</i>)
Coordination/synchronization	+ <i>via libraries</i>	using general ordering	explicitly
Import of WSDL, IDL, etc.	(+)	<i>proprietary via SoaML</i>	-
Graphical Test architecture	- needed!	+	+
Link to UML	-	+	in preparation

GOOD REASONS FOR STANDARDIZED TEST LANGUAGES

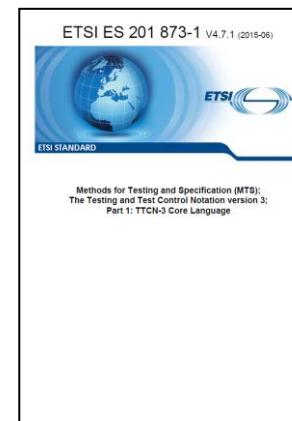

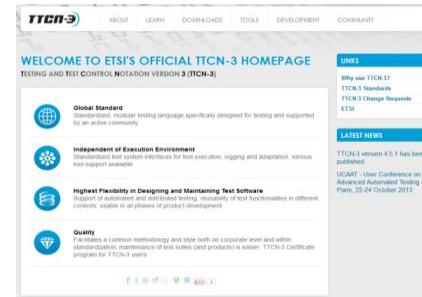

- They significantly increases your system quality.
- You can focus on what to test, not on how.
- They reduce costs and efforts in test system maintenance.
- They are independent of access technology, operating system and implementation domain
- They support communication between system development and test department.
- You can count on available, trained and certified experts

CONCLUSION

- **TTCN-3, UTP and TDL**
 - international Standards for testing
 - allow abstract definitions for testing
 - (partly) accepted in research and industry
- **Tool support** (still weak)
 - UML -> UTP/TDL -> TTCN-3
- Test automation need further enhancements

UML Testing Profile 2 (UTP2)

Initial Submission
In response to: UML Testing Profile 2 (UTP2) RFP (OMG Document ad/2013-12-08)

OMG Document Number: ad/2014-05-01
Normative reference: -
Machine readable file(s): ad/2014-05-02
Normative: <http://www.omg.org/spec/UTP2/04/05021/rfp.xls>
<http://www.omg.org/spec/UTP2/04/05021/datasheet.xls>
<http://www.omg.org/spec/UTP2/04/05021/datasheet.xls>
Non-normative: -
The following OMG member organizations submitted this specification (in alphabetic order):

- Fraunhofer FOKUS, Germany
- SOFTEAM France

The following OMG and external member organizations supported this specification (in alphabetic order):

- Arqtek, United Kingdom and USA
- Institute of Space Sciences, Spain
- KavcoGevity Inc., Switzerland
- Cross Software Testing, USA
- SELLEX US, India
- Simatic Research Lab, Norway

UML Testing Profile

Mission:
As software becomes increasingly pervasive, the need for quality and reliability in software systems continues to increase. Testing methods must have evolved to support development in distributed environments, build software with higher quality. Prior to the development of the UML Testing Profile, the most widely used modeling language did not support for specifying test cases.

The UTP provides extensions to UML to support the design - instantiation, specification, analysis, and execution of test cases. The UTP is a general language for testing. It is independent of implementation languages and technologies, and can be applied in a variety of environments.

In defining the UTP, the group of organizations who participated in its development had a core set of goals:

- **Manageability** - make our process, use, construction, propagation by reuse, and evolution as efficient as the overhead necessary to learn and use the language.
- **Clarity** - provide a clear expression of testing concepts that helps quality engineers and system analysts to understand them. Concerns as early as possible.
- **Extensibility** - create a generic profile that can be extended to a variety of domains (e.g. system testing, functional, performance, integration, regression) and technologies (e.g. static).

The website provides us to share information about the profile, including new publications that describe its use and evolution. If you have any questions or comments, or if you have information about other papers, books, or tools related to the UML Testing Profile, please share them, please contact us at utp@omnibuzz.org.

The UTP2 Consortium:
The Consortium is constituted by leading companies and organizations involved in testing methods and technologies and in UML.

Consortium Partner **Contact Person**
QSystem [QSystem](#)
Fraunhofer FOKUS [Bernd Lohr](#)
Institute of Space Sciences [Paul Sotter](#)
Tessigo [Tessigo](#)
University of Göttingen [Ulf Schreiber](#)

The following mailing lists are available for requesting information and reporting issues:

- utp@omnibuzz.org for general discussion
- utp-issues@omnibuzz.org to report issues

In the case of general questions regarding the UML Testing Profile, please contact:

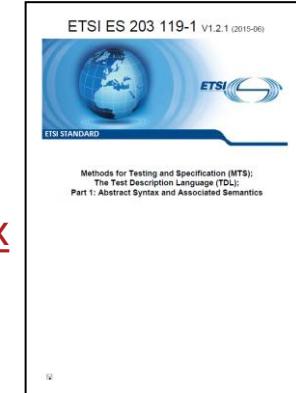

- [the Subcommittee](#)

How To Get Involved:

If you are interested in getting involved with the profile, including new publications that describe its use and evolution. If you have any questions or comments, or if you have information about other papers, books, or tools related to the UML Testing Profile, please share them, please contact us at utp@omnibuzz.org.
