Concept

The RESPONSIBILITY project aims

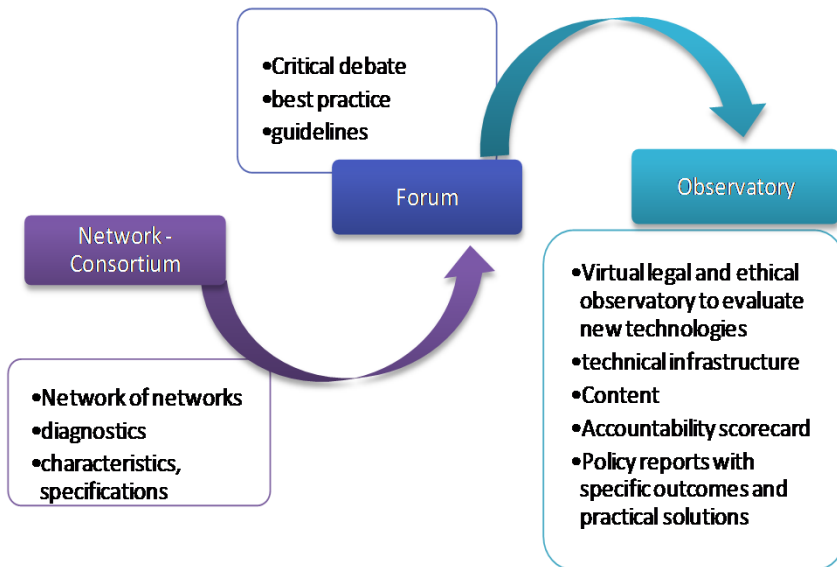

- To create a network of stakeholders that would adopt and diffuse a **common understanding** in RRI between different actors around the globe.
- To develop a model and provide a tool for international cooperation involving **the societal, policy and research stakeholders** to these activities.
- To provide practical means and structure a crucial interaction between society and research providing a **set of recommendations and tools** to policy makers and active RRI stakeholders in order to take the necessary measures to nest responsible research and innovation into products and services from the very beginning ("**efficient RRI by design**").

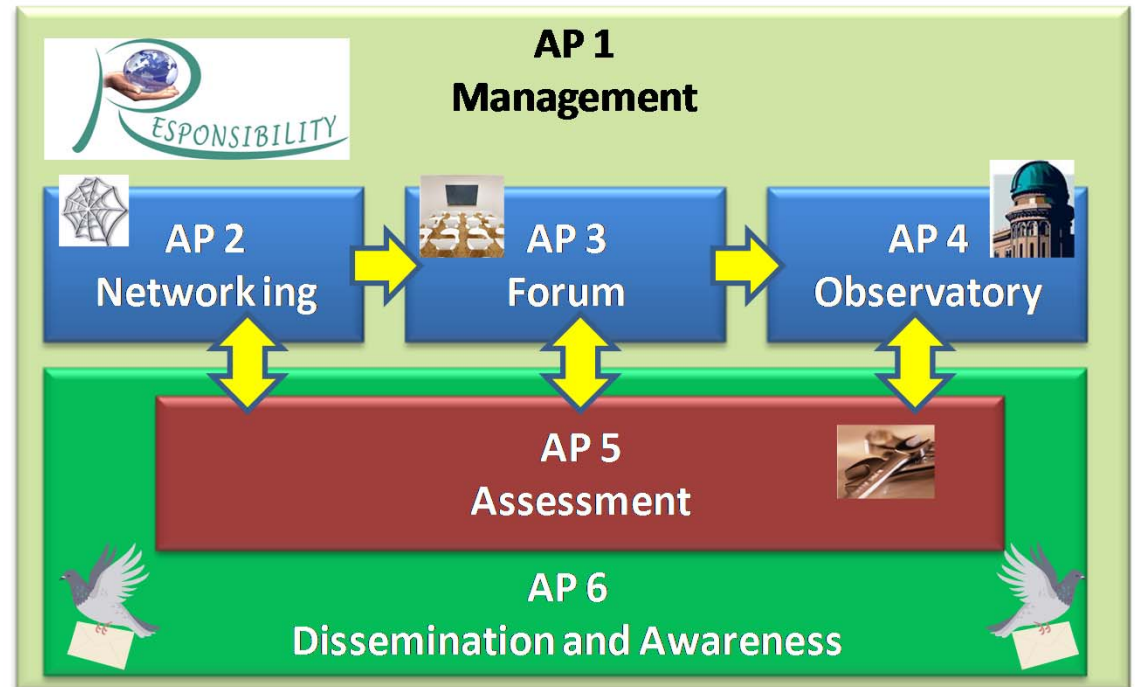

Approach

The RESPONSIBILITY project has the scope

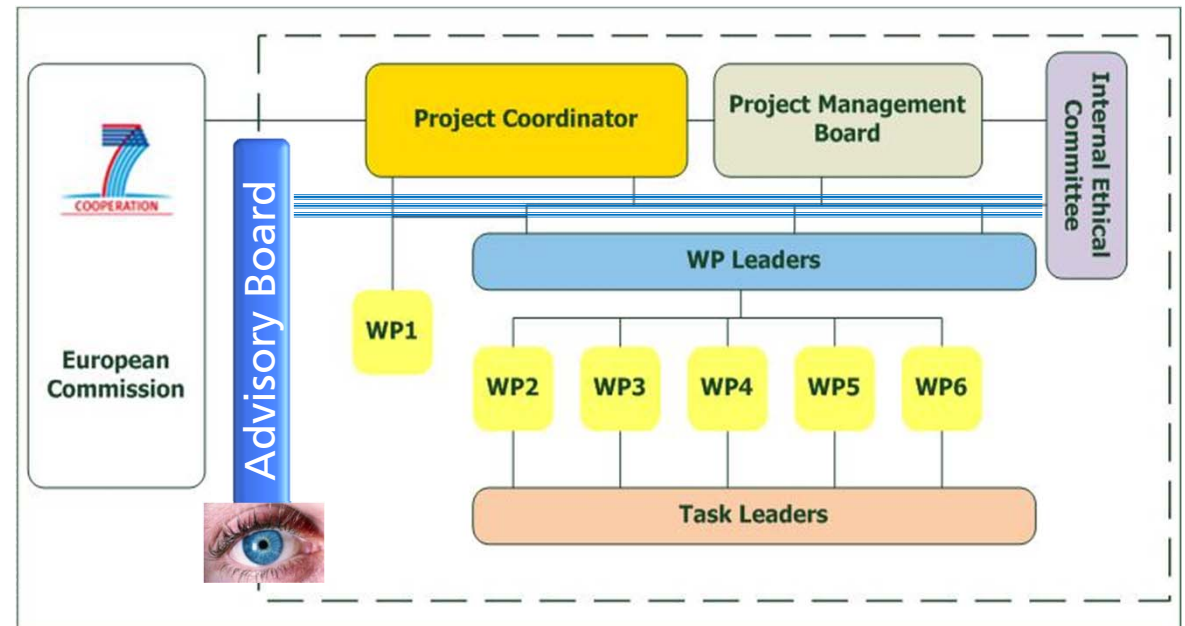

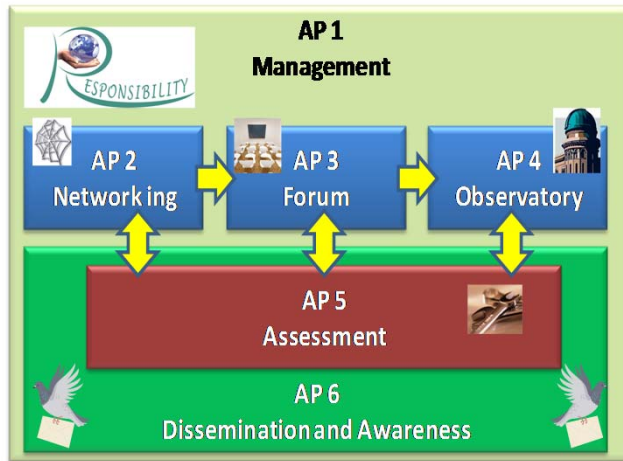

- to create a **virtual Observatory** of RRI
- to develop a structure that would support the enhancement of common understanding and the diffusion of knowledge and the deployment of practical tools
- to assist the societal stakeholders to have an organized virtual place where the practical and theoretical information will be easily assessable and usable
