Vorwort

Das Tätigkeitsfeld des Fraunhofer-Instituts für Techno- und Wirtschaftsmathematik ITWM umfasst anwendungsnahe Grundlagenforschung, angewandte Forschung sowie Beratung und kundenspezifische Lösungen auf allen Gebieten, die für Techno- und Wirtschaftsmathematik bedeutsam sind.

In der Reihe »Berichte des Fraunhofer ITWM« soll die Arbeit des Instituts kontinuierlich einer interessierten Öffentlichkeit in Industrie, Wirtschaft und Wissenschaft vorgestellt werden. Durch die enge Verzahnung mit dem Fachbereich Mathematik der Universität Kaiserslautern sowie durch zahlreiche Kooperationen mit internationalen Institutionen und Hochschulen in den Bereichen Ausbildung und Forschung ist ein großes Potenzial für Forschungsberichte vorhanden. In die Berichtreihe werden sowohl hervorragende Diplom- und Projektarbeiten und Dissertationen als auch Forschungsberichte der Institutsmitarbeiter und Institutsgäste zu aktuellen Fragen der Techno- und Wirtschaftsmathematik aufgenommen.

Darüber hinaus bietet die Reihe ein Forum für die Berichterstattung über die zahlreichen Kooperationsprojekte des Instituts mit Partnern aus Industrie und Wirtschaft.

Berichterstattung heißt hier Dokumentation des Transfers aktueller Ergebnisse aus mathematischer Forschungs- und Entwicklungsarbeit in industrielle Anwendungen und Softwareprodukte – und umgekehrt, denn Probleme der Praxis generieren neue interessante mathematische Fragestellungen.

Abstract

In order to improve the design of Li ion batteries the complex interplay of various physical phenomena in the active particles of the electrodes and in the electrolyte has to be balanced. The separate transport phenomena in the electrolyte and in the active particle as well as their coupling due to the electrochemical reactions at the interfaces between the electrode particles and the electrolyte will influence the performance and the lifetime of a battery. Any modeling of the complex phenomena during the usage of a battery has therefore to be based on sound physical and chemical principles in order to allow for reliable predictions for the response of the battery to changing load conditions. We will present a modeling approach for the transport processes in the electrolyte and the electrodes based on non-equilibrium thermodynamics and transport theory. The assumption of local charge neutrality, which is known to be valid in concentrated electrolytes, is explicitly used to identify the independent thermodynamic variables and fluxes. The theory guarantees strictly positive entropy production. Differences to other theories will be discussed.

1 Introduction

Mathematical modeling of Li-ion batteries on cell level was pioneered by the work of Newman and his coworkers [1, 2, 3] and extended and refined by many other authors [4, 5, 6]. The modeling approach is based on transport equations for Li ions and charges in the electrolyte as well as in the active particles of cathode and anode (for an illustration of the Lithium Ion battery see Fig. 1). Originally the electrodes were considered as porous media [1] made of a porous active particle skeleton filled with electrolyte. Later the porous model was derived with the help of volume averaging techniques for some set of equations for the different transport mechanisms in electrolyte and in the solid active particles [7]. The transport of charges and species between the electrolyte and the active particles was described with the help of a Butler - Volmer reaction model [2] and some assumptions about continuity conditions for charge and species flux. So far approaches where the active particles are resolved and the transport in particles and electrolytes are treated separately are rare [8, 9]. But whether one starts directly with the porous electrode model or with a model resolving the fine structure of the electrode, it is in both cases important to base the battery model on thermodynamically consistent concepts, especially if at some point also the local heat production is to be simulated.

Figure 1: Illustration of a Lithium ion battery. The spheres are the active particles of the porous electrodes in which Lithium Ions (green dots) can be stored. The voids between particles and between the electrodes are filled with an electrolyte in which Lithium ions diffuse and migrate. Electrons, on the other hand, have to move through the external circuit.

Charge transport mechanisms in active particles and in electrolyte are completely different on the microscopic (atomic) scale. In active particles, charge is transported mainly by pure electronic conduction. The contribution of the ion diffusion in the active particles to the electric current can be neglected due to the large mobility of the electrons compared to the ions. Charge transport in the electrolyte, on the other side, is exclusively due to ionic transport. In fact, the transfer of electrons into the electrolyte would result in the reduction of Li ions in the electrolyte to metallic Lithium, and is considered to be one of the many degradation mechanisms in Li ion batteries [10]. Due to the large mobility of electrons local charge neutrality is easily maintained in the active particles. The charge of an inserted Li Ions is instantaneously shielded by local rearrangements of electronic charges and the transport of electrons into the active particles over the current collectors. In the electrolyte the transport of species (ions) and charge is strongly coupled. Both, charge and species fluxes are caused by gradients in the chemical potential as well as by gradients in the electrical potentials. The constitutive relations for the charge and species fluxes describing these relations are well known for dilute electrolytes [2]. In batteries we have to deal with highly concentrated electrolytes. Some relations for these electrolytes are also derived in [2] combining multicomponent diffusion theory and considerations for chemical equilibria between reacting species in the electrolyte. As it will be shown below, the result is at variance with the general form of constitutive relations in ionic liquids, usually obtained in non equilibrium thermodynamics [11, 12]. A main contribution of our paper is therefore the careful rederivation of the constitutive relations for ion and charge flux in a mixture of a fully dissociated binary salt in a neutral solvent, using the well known concepts of nonequilibrium thermodynamics [11, 12]. As it is known that local charge neutrality is preserved in concentrated electrolytes except for the diffuse part of the double layer around active particles [2], we make explicit use of this property in our derivation of the constitutive relations. Due to the limited space for this article, details of the more general derivation, including thermal fluctuations will be given elsewhere [13]. With these equations the transition to the effective porous medium theory for cathode and anode can be obtained with standard techniques as e.g. volume averaging [7].

2 Model

The starting point for a continuum model of charge and species transport in a Li-ion battery are the conservation equation for Li-ion concentration c and charges q . The continuity equation for the concentration of Li Ions c is given by

$$\frac{\partial c}{\partial t} = -\vec{\nabla} \vec{N}_+ \quad (1)$$

Here \vec{N}_+ is the flux of Li ions. The equation for the charge concentration is given by

$$\frac{\partial q}{\partial t} = -\vec{\nabla} \vec{j} \quad (2)$$

where \vec{j} is the electrical current. The approximation of charge neutrality requires not only that the time derivative in (2) is identical zero, but that the local charge q vanishes i.e. $q \equiv 0$. The main challenge for a constitutive theory is to derive a thermodynamically consistent relation for the fluxes \vec{N}_+ and the electrical current \vec{j} . Also, the influence of solvent molecules and negative ions to the transport properties has to be clarified.

2.1 Charge and species transport in a concentrated electrolyte

To obtain a thermodynamically consistent model for charge and ion fluxes in the electrolyte we apply the well known formalism of non-equilibrium thermodynamics [11, 12] to a mixture of fully dissociated binary salt and a solvent. The concentrations of positive and negative ions with charge z_+ and z_- are c_+ and c_- , respectively. The concentration of the solvent is c_0 . Instead of motivating our theory with considerations from dilute electrolyte theory, we are considering the opposite limit of concentrated electrolytes. In this limit the Debye length λ_D is so small, that local charge fluctuations are restricted to scales well below about 100 nm [2]. We therefore impose local charge neutrality $z_+c_+ + z_-c_- = 0$ in our derivation exactly. This will allow us to identify the relevant measurable transport coefficients for the electrolytes used in Li ion batteries. For example, the strong Coulomb interaction between the ions prevent independent motion of ions to occur on the scale of battery cell dimensions. The main diffusion process will be correlated interdiffusion with a uniquely defined interdiffusion coefficient for positive and negative ions. Independent self diffusion of the different ions with different self diffusion coefficient leading to slow charge separation is excluded in a strictly charge neutral system.

Under normal operation conditions for a Li ion battery we may safely assume that convection can be excluded as transport mechanism. This assumption allows to eliminate the concentration of the neutral solvent as independent variable. With M_0, M_+, M_- being the molar masses of solvent and positive and negative ions respectively we get in the absence of convection the relations

$$M_0dc_0 + M_+dc_+ + M_-dc_- = 0 \quad (3)$$

for the changes in the respective concentrations. Charge neutrality is then used to eliminate the concentration of the negative ions using the relation

$$z_+c_+ + z_-c_- = 0 \quad (4)$$

It is therefore sufficient to determine the transport equations for the concentration $c = c_+ = -\frac{z_-}{z_+}c_-$. Using the constraints between changes in energy density u , entropy density s , concentration c and charge

density q , and denoting as usually the temperature by T , the thermodynamic relation for the electrolyte in an external field Φ can be written as

$$du = Tds + \mu dc + \Phi dq \quad (5)$$

Due to the imposed charge neutrality the changes in the charge are zero i.e. $dq = 0$. The energy density also contains the contribution from the electric fields [14]. The effective chemical potential μ is a combination of the chemical potentials μ_+ , μ_- and μ_0 of the ions and the solvent.

$$\mu = \tilde{\mu}_+ - \frac{z_+}{z_-} \tilde{\mu}_- \quad (6)$$

$$\tilde{\mu}_+ = \mu_+ - \frac{M_+}{M_0} \mu_0 \quad (7)$$

$$\tilde{\mu}_- = \mu_- - \frac{M_-}{M_0} \mu_0 \quad (8)$$

Formally, the chemical potential μ is the work to be performed for injecting 1mol of Li ions from infinity in the electrolyte including the work to rearrange the negative ions and neutral solvent molecules such that charge neutrality and momentum are conserved. The entropy production σ in the system fulfills the relation [12, 13]

$$Td\sigma = -\vec{J}_s \vec{\nabla} T - \vec{N}_+ \vec{\nabla} \tilde{\mu}_+ - \vec{N}_- \vec{\nabla} \tilde{\mu}_- - \vec{j} \vec{\nabla} \Phi \quad (9)$$

The electric current is given by

$$\vec{j} = z_+ \vec{N}_+ + z_- \vec{N}_- \quad (10)$$

Using this relation to eliminate the flux of negative ions \vec{N}_- , we obtain

$$Td\sigma = -\vec{J}_s \vec{\nabla} T - \vec{N}_+ \vec{\nabla} \mu - \vec{j} \vec{\nabla} (\Phi + \frac{\tilde{\mu}_-}{z_- F}) \quad (11)$$

where F is the Faraday number. Note that the form of the entropy production determines the set of independent thermodynamic forces and thus the correct form of the Onsager relations in the constitutive equations for the fluxes [12]. In the following we neglect for simplicity thermal fluctuations e.g. $dT = 0$.

Having identified the independent thermodynamic variables and forces, it is possible to formulate the constitutive relations for the fluxes. Under the necessary requirement of strictly positive entropy production they have the general form

$$\vec{N}_+ = -L_{11} \vec{\nabla} \tilde{\mu}_+ - L_{12} \vec{\nabla} \tilde{\Phi} \quad (12)$$

$$\vec{j} = -L_{21} \vec{\nabla} \tilde{\mu}_+ - L_{22} \vec{\nabla} \tilde{\Phi} \quad (13)$$

where $\tilde{\Phi} = \Phi + \frac{\tilde{\mu}_-}{z_- F}$. $\tilde{\Phi}$ may be interpreted as the renormalized effective potential due to the partial shielding of the external potential by the negative ions. The Onsager matrix L_{ij} has to be symmetric positive definite i.e. $L_{12} = L_{21}$. A simple rearrangement of (12), (13) and introduction of standard notation leads to

$$\vec{N}_+ = -D_e \vec{\nabla} c + \frac{t_+}{F z_+} \vec{j} \quad (14)$$

$$\vec{j} = -\kappa \vec{\nabla} \tilde{\Phi} - \kappa \frac{t_+}{F z_+} \left(\frac{\partial \tilde{\mu}_+}{\partial c} \right) \vec{\nabla} c \quad (15)$$

The transport coefficients D_e, t_+, κ are the ion collective interdiffusion coefficient of the fully interacting system at zero electric current, the transference number and the ion conductivity, respectively. They are given by

$$\kappa = L_{22} \quad (16)$$

$$t_+ = \frac{z_+ L_{12} F}{\kappa} \quad (17)$$

$$D_e = (L_{11} - \kappa \frac{t_+^2}{F^2 z_+^2}) \left(\frac{\partial \tilde{\mu}_+}{\partial c} \right) = \frac{\det L}{L_{22}} \left(\frac{\partial \tilde{\mu}_+}{\partial c} \right) \quad (18)$$

The constitutive relation for the negative ion flux is a consequence of the definition of the current (10) and charge neutrality

$$\vec{N}_- = -D_e \vec{\nabla} c_- + \frac{t_-}{F z_-} \vec{j} \quad (19)$$

Here $t_- = 1 - t_+$ is the transference number of negative ions. The interdiffusion coefficient for the density of negative ions is the same as the one for the positive ion density due to the imposed charge neutrality. This result is consistent with fundamental Green Kubo relation for the interdiffusion coefficient in a binary systems [15]. For comparison with experiments it is important to realize that it is the interdiffusion coefficient, and not the self diffusion coefficients, which has to be determined in order to simulate the behavior of Li ion batteries. In general the two self diffusion coefficients and the interdiffusion coefficient are mutually different from each other [15, 16].

It is also important to note that the relation (15) is different from the one derived in [2]. The constitutive relation for the electrical current in [2] depends on the type of chemical reactions in the electrolyte and is not just a property of the local gradients in the independent field variables. This ansatz causes an asymmetry in the relations for the ion flux and the electrical current, which violates the fundamental Onsager relation necessary for strictly positive entropy production. In the case of a simple ion insertion reaction at the electrodes the factor t_+ in the relation for the current in (15), in [2] is replaced by $-(1 - t_+)$. I.e. the absolute value and the sign in front of the $\vec{\nabla} c$ term are different compared to our theory. The isothermal entropy production for the two models are

$$T\sigma_N = D_e \left(\frac{\partial \mu}{\partial c} \right)_T (\vec{\nabla} c)^2 + \frac{\vec{j}^2}{\kappa} - \left(\frac{\partial \mu}{\partial c} \right)_T \frac{\vec{j} \vec{\nabla} c}{F} \quad (20)$$

in the theory of [2] and

$$T\sigma_{LZ} = D_e \left(\frac{\partial \mu}{\partial c} \right)_T (\vec{\nabla} c)^2 + \frac{\vec{j}^2}{\kappa} \quad (21)$$

in our case. Since the thermodynamic derivative $\left(\frac{\partial \mu}{\partial c} \right)_T$ and the interdiffusion coefficient D_e are always positive the model presented here leads as expected to the strictly positive entropy production in Eq. (21). The last term in Eq. (20) does not have a definite sign and therefore allows in principal for negative entropy production.

Since the relation used in [2] is used as starting point for many battery modeling approaches [17, 3, 8], differences to our approach may be expected (cf Ref. [18]).

2.2 Transport in active particles

For the transport in the active particles, the diffusion and the conduction are essentially decoupled, since the mobility of the ions is much smaller than the one of the electrons and therefore the electric conduction is nearly completely carried by the electrons. The ions in the active particles are transported by diffusion only. The constitutive relations for ion flux and electrical current are given by

$$\vec{N}_+ = -D_s \vec{\nabla} c \quad (22)$$

$$\vec{j} = -\sigma_s \vec{\nabla} \Phi \quad (23)$$

where σ_s and D_s are the electronic conductivity and the ion diffusion coefficient respectively. As long as the binder and the additives in the electrodes are not treated as different phases the electronic conductivity is an effective conductivity of active particles and additives.

2.3 Intercalation modeling and interface conditions

For the coupling of the transport in the active particles and in the solid electrolyte, interface conditions have to be formulated. The interface conditions describe the intercalation reaction and the de-intercalation reaction respectively on the mesoscopic scale (i.e beyond the scale of the diffuse layer [2]). It is assumed that the transport of ions across the interface is completely described by the Butler Volmer expression i_{se} for the intercalation reaction [2].

$$i_{se} = i_0 \left(\exp\left[\frac{\alpha_a F}{RT} \eta_s\right] - \exp\left[\frac{-\alpha_c F}{RT} \eta_s\right] \right) \quad (24)$$

α_A and α_C with $\alpha_A + \alpha_C = 1$ are weighting the anodic and the cathodic contribution of the overpotential η_s to the overall reaction. The overpotential is defined by

$$\eta_s := \Phi_s - \Phi_e - U_0. \quad (25)$$

Here U_0 is the half cell open circuit potential of the respective electrode.

The amplitude i_0 is given by

$$i_0 = k (c)^{\alpha_a} (c_s)^{\alpha_a} \left(1 - \frac{c_s}{c_{s,max}} \right)^{\alpha_c} \quad (26)$$

k is a reaction rate. $c_{s,max}$ is the maximum concentration which can be stored in the active particle. We assume that Li ions are not stored in the double layer (i.e. all Li ions are intercalated in the active particle or released into the electrolyte). There should also be no flux of negative charges across the double layer. Neither enter electrons the electrolyte nor intercalate negative ions from the electrolyte in the active particles under ideal conditions. This especially means that the total current across the electrolyte–particle interface is due to the transport of positive ions only. If the particle is completely filled i.e. $c = c_{s,max}$, it has to be made sure by the interface conditions that no electrical current \vec{j} is carried by negative charge carriers across the interface. These conditions can be formulated mathematically in

the following way with the normal \vec{n} pointing from the solid into the electrolyte

$$\vec{j}_s \vec{n} = \vec{j}_e \vec{n} \quad (27)$$

$$\vec{j}_s \vec{n} = i_{se} \quad (28)$$

$$\vec{N}_{+,s} \vec{n} = \vec{N}_{+,e} \vec{n} \quad (29)$$

$$\vec{N}_{+,s} \vec{n} = \frac{i_{se}}{F} \quad (30)$$

To solve the model for the battery problem additional boundary conditions have to be provided for the potential and the current at the current collectors in contact with the active particles. These conditions are determined by the operating conditions of the battery. In addition the ion fluxes have to be set to zero at all external boundaries.

3 Conclusions

We derived a thermodynamically consistent model for transport of charges in a battery cell, consisting of active particles and electrolyte in cathode and anode. The modeling of the separator was not addressed, but it is straightforward using effective diffusion coefficients and ionic conductivities in the electrolyte theory, if the separator itself is a porous structure [1]. To test the model, a 1-D porous electrode version of the model was implemented in the commercial software package Comsol and compared with the model used in [1]. Detailed results will be presented in [18]. Numerical algorithm for the introduced here model, as well as its numerical study for 3D geometry, are presented in [19]

(23 pages, 2002)
32. M. Krekel
Optimal portfolios with a loan dependent credit spread
Keywords: Portfolio optimisation, stochastic control, HJB equation, credit spread, log utility, power utility, non-linear wealth dynamics
(25 pages, 2002)
33. J. Ohser, W. Nagel, K. Schladitz
The Euler number of discretized sets – on the choice of adjacency in homogeneous lattices
Keywords: image analysis, Euler number, neighborhood relationships, cuboidal lattice
(32 pages, 2002)

34. I. Ginzburg, K. Steiner
Lattice Boltzmann Model for Free-Surface flow and Its Application to Filling Process in Casting
Keywords: Lattice Boltzmann models; free-surface phenomena; interface boundary conditions; filling processes; injection molding; volume of fluid method; interface boundary conditions; advection-schemes; upwind-schemes
(54 pages, 2002)
35. M. Günther, A. Klar, T. Materne, R. Wegener
Multivalued fundamental diagrams and stop and go waves for continuum traffic equations
Keywords: traffic flow, macroscopic equations, kinetic derivation, multivalued fundamental diagram, stop and go waves, phase transitions
(25 pages, 2002)
36. S. Feldmann, P. Lang, D. Prätzel-Wolters
Parameter influence on the zeros of network determinants
Keywords: Networks, Equicofactor matrix polynomials, Realization theory, Matrix perturbation theory
(30 pages, 2002)
37. K. Koch, J. Ohser, K. Schladitz
Spectral theory for random closed sets and estimating the covariance via frequency space
Keywords: Random set, Bartlett spectrum, fast Fourier transform, power spectrum
(28 pages, 2002)
38. D. d'Humières, I. Ginzburg
Multi-reflection boundary conditions for lattice Boltzmann models
Keywords: lattice Boltzmann equation, boudary conditions, bounce-back rule, Navier-Stokes equation
(72 pages, 2002)
39. R. Korn
Elementare Finanzmathematik
Keywords: Finanzmathematik, Aktien, Optionen, Portfolio-Optimierung, Börse, Lehrerweiterbildung, Mathe-matikunterricht
(98 pages, 2002)
40. J. Kallrath, M. C. Müller, S. Nickel
Batch Presorting Problems: Models and Complexity Results
Keywords: Complexity theory, Integer programming, Assignment, Logistics
(19 pages, 2002)
41. J. Linn
On the frame-invariant description of the phase space of the Folgar-Tucker equation
Key words: fiber orientation, Folgar-Tucker equation, injection molding
(5 pages, 2003)
42. T. Hanne, S. Nickel
A Multi-Objective Evolutionary Algorithm for Scheduling and Inspection Planning in Software Development Projects
Key words: multiple objective programming, project management and scheduling, software development, evolutionary algorithms, efficient set
(29 pages, 2003)
43. T. Bortfeld , K.-H. Küfer, M. Monz, A. Scherrer, C. Thieke, H. Trinkaus
Intensity-Modulated Radiotherapy - A Large Scale Multi-Criteria Programming Problem
- Keywords: multiple criteria optimization, representative systems of Pareto solutions, adaptive triangulation, clustering and disaggregation techniques, visualization of Pareto solutions, medical physics, external beam radiotherapy planning, intensity modulated radiotherapy
(31 pages, 2003)
44. T. Halfmann, T. Wichmann
Overview of Symbolic Methods in Industrial Analog Circuit Design
Keywords: CAD, automated analog circuit design, symbolic analysis, computer algebra, behavioral modeling, system simulation, circuit sizing, macro modeling, differential-algebraic equations, index
(17 pages, 2003)
45. S. E. Mikhailov, J. Orlik
Asymptotic Homogenisation in Strength and Fatigue Durability Analysis of Composites
Keywords: multiscale structures, asymptotic homogenization, strength, fatigue, singularity, non-local conditions
(14 pages, 2003)
46. P. Domínguez-Marín, P. Hansen, N. Mladenović, S. Nickel
Heuristic Procedures for Solving the Discrete Ordered Median Problem
Keywords: genetic algorithms, variable neighborhood search, discrete facility location
(31 pages, 2003)
47. N. Boland, P. Domínguez-Marín, S. Nickel, J. Puerto
Exact Procedures for Solving the Discrete Ordered Median Problem
Keywords: discrete location, Integer programming
(41 pages, 2003)
48. S. Feldmann, P. Lang
Padé-like reduction of stable discrete linear systems preserving their stability
Keywords: Discrete linear systems, model reduction, stability, Hankel matrix, Stein equation
(16 pages, 2003)
49. J. Kallrath, S. Nickel
A Polynomial Case of the Batch Presorting Problem
Keywords: batch presorting problem, online optimization, competitive analysis, polynomial algorithms, logistics
(17 pages, 2003)
50. T. Hanne, H. L. Trinkaus
knowCube for MCDM – Visual and Interactive Support for Multicriteria Decision Making
Key words: Multicriteria decision making, knowledge management, decision support systems, visual interfaces, interactive navigation, real-life applications.
(26 pages, 2003)
51. O. Iliev, V. Laptev
On Numerical Simulation of Flow Through Oil Filters
Keywords: oil filters, coupled flow in plain and porous media, Navier-Stokes, Brinkman, numerical simulation
(8 pages, 2003)
52. W. Dörfler, O. Iliev, D. Stoyanov, D. Vassileva
On a Multigrid Adaptive Refinement Solver for Saturated Non-Newtonian Flow in Porous Media
Keywords: Nonlinear multigrid, adaptive refinement, non-Newtonian flow in porous media
(17 pages, 2003)
53. S. Kruse
On the Pricing of Forward Starting Options under Stochastic Volatility
Keywords: Option pricing, forward starting options, Heston model, stochastic volatility, cliquet options
(11 pages, 2003)
54. O. Iliev, D. Stoyanov
Multigrid – adaptive local refinement solver for incompressible flows
Keywords: Navier-Stokes equations, incompressible flow, projection-type splitting, SIMPLE, multigrid methods, adaptive local refinement, lid-driven flow in a cavity
(37 pages, 2003)
55. V. Starikovicius
The multiphase flow and heat transfer in porous media
Keywords: Two-phase flow in porous media, various formulations, global pressure, multiphase mixture model, numerical simulation
(30 pages, 2003)
56. P. Lang, A. Sarishvili, A. Wirsén
Blocked neural networks for knowledge extraction in the software development process
Keywords: Blocked Neural Networks, Nonlinear Regression, Knowledge Extraction, Code Inspection
(21 pages, 2003)
57. H. Knafl, P. Lang, S. Zeiser
Diagnosis aiding in Regulation Thermography using Fuzzy Logic
Keywords: fuzzy logic, knowledge representation, expert system
(22 pages, 2003)
58. M. T. Melo, S. Nickel, F. Saldanha da Gama
Largescale models for dynamic multi-commodity capacitated facility location
Keywords: supply chain management, strategic planning, dynamic location, modeling
(40 pages, 2003)
59. J. Orlik
Homogenization for contact problems with periodically rough surfaces
Keywords: asymptotic homogenization, contact problems
(28 pages, 2004)
60. A. Scherrer, K.-H. Küfer, M. Monz, F. Alonso, T. Bortfeld
IMRT planning on adaptive volume structures – a significant advance of computational complexity
Keywords: Intensity-modulated radiation therapy (IMRT), inverse treatment planning, adaptive volume structures, hierarchical clustering, local refinement, adaptive clustering, convex programming, mesh generation, multi-grid methods
(24 pages, 2004)
61. D. Kehrwald
Parallel lattice Boltzmann simulation of complex flows
Keywords: Lattice Boltzmann methods, parallel computing, microstructure simulation, virtual material design, pseudo-plastic fluids, liquid composite moulding
(12 pages, 2004)
62. O. Iliev, J. Linn, M. Moog, D. Niedziela, V. Starikovicius
On the Performance of Certain Iterative Solvers for Coupled Systems Arising in Discretization of Non-Newtonian Flow Equations

Keywords: Performance of iterative solvers, Preconditioners, Non-Newtonian flow
(17 pages, 2004)

63. R. Ciegis, O. Iliev, S. Rief, K. Steiner
On Modelling and Simulation of Different Regimes for Liquid Polymer Moulding
Keywords: Liquid Polymer Moulding, Modelling, Simulation, Infiltration, Front Propagation, non-Newtonian flow in porous media
(43 pages, 2004)

64. T. Hanne, H. Neu
Simulating Human Resources in Software Development Processes
Keywords: Human resource modeling, software process productivity, human factors, learning curve
(14 pages, 2004)

65. O. Iliev, A. Mikelic, P. Popov
Fluid structure interaction problems in deformable porous media: Toward permeability of deformable porous media
Keywords: fluid-structure interaction, deformable porous media, upscaling, linear elasticity, stokes, finite elements
(28 pages, 2004)

66. F. Gaspar, O. Iliev, F. Lisbona, A. Naumovich, P. Vabishchevich
On numerical solution of 1-D poroelasticity equations in a multilayered domain
Keywords: poroelasticity, multilayered material, finite volume discretization, MAC type grid
(41 pages, 2004)

67. J. Ohser, K. Schladitz, K. Koch, M. Nöthe
Diffraction by image processing and its application in materials science
Keywords: porous microstructure, image analysis, random set, fast Fourier transform, power spectrum, Barlett spectrum
(13 pages, 2004)

68. H. Neunzert
Mathematics as a Technology: Challenges for the next 10 Years
Keywords: applied mathematics, technology, modelling, simulation, visualization, optimization, glass processing, spinning processes, fiber-fluid interaction, turbulence effects, topological optimization, multicriteria optimization, Uncertainty and Risk, financial mathematics, Malliavin calculus, Monte-Carlo methods, virtual material design, filtration, bio-informatics, system biology
(29 pages, 2004)

69. R. Ewing, O. Iliev, R. Lazarov, A. Naumovich
On convergence of certain finite difference discretizations for 1D poroelasticity interface problems
Keywords: poroelasticity, multilayered material, finite volume discretizations, MAC type grid, error estimates
(26 pages, 2004)

70. W. Dörfler, O. Iliev, D. Stoyanov, D. Vassileva
On Efficient Simulation of Non-Newtonian Flow in Saturated Porous Media with a Multigrid Adaptive Refinement Solver
Keywords: Nonlinear multigrid, adaptive refinement, non-Newtonian in porous media
(25 pages, 2004)

71. J. Kalcsics, S. Nickel, M. Schröder
Towards a Unified Territory Design Approach – Applications, Algorithms and GIS Integration
Keywords: territory design, political districting, sales territory alignment, optimization algorithms, Geographical Information Systems
(40 pages, 2005)

72. K. Schladitz, S. Peters, D. Reinel-Bitzer, A. Wiegmann, J. Ohser
Design of acoustic trim based on geometric modeling and flow simulation for non-woven
Keywords: random system of fibers, Poisson line process, flow resistivity, acoustic absorption, Lattice-Boltzmann method, non-woven
(21 pages, 2005)

73. V. Rutka, A. Wiegmann
Explicit Jump Immersed Interface Method for virtual material design of the effective elastic moduli of composite materials
Keywords: virtual material design, explicit jump immersed interface method, effective elastic moduli, composite materials
(22 pages, 2005)

74. T. Hanne
Eine Übersicht zum Scheduling von Baustellen
Keywords: Projektplanung, Scheduling, Bauplanung, Bauindustrie
(32 pages, 2005)

75. J. Linn
The Folgar-Tucker Model as a Differential Algebraic System for Fiber Orientation Calculation
Keywords: fiber orientation, Folgar-Tucker model, invariants, algebraic constraints, phase space, trace stability
(15 pages, 2005)

76. M. Speckert, K. Dreßler, H. Mauch, A. Lion, G. J. Wierda
Simulation eines neuartigen Prüfsystems für Achserprobungen durch MKS-Modellierung einschließlich Regelung
Keywords: virtual test rig, suspension testing, multibody simulation, modeling hexapod test rig, optimization of test rig configuration
(20 pages, 2005)

77. K.-H. Küfer, M. Monz, A. Scherrer, P. Süss, F. Alonso, A. S. A. Sultan, Th. Bortfeld, D. Craft, Chr. Thieke
Multicriteria optimization in intensity modulated radiotherapy planning
Keywords: multicriteria optimization, extreme solutions, real-time decision making, adaptive approximation schemes, clustering methods, IMRT planning, reverse engineering
(51 pages, 2005)

78. S. Amstutz, H. Andrä
A new algorithm for topology optimization using a level-set method
Keywords: shape optimization, topology optimization, topological sensitivity, level-set
(22 pages, 2005)

79. N. Ettrich
Generation of surface elevation models for urban drainage simulation
Keywords: Flooding, simulation, urban elevation models, laser scanning
(22 pages, 2005)

80. H. Andrä, J. Linn, I. Matei, I. Shklyar, K. Steiner, E. Teichmann
OPTCAST – Entwicklung adäquater Strukturoptimierungsverfahren für Gießereien Technischer Bericht (KURZFASSUNG)
Keywords: Topologieoptimierung, Level-Set-Methode, Gießprozesssimulation, Gießtechnische Restriktionen, CAE-Kette zur Strukturoptimierung
(77 pages, 2005)

81. N. Marheineke, R. Wegener
Fiber Dynamics in Turbulent Flows Part I: General Modeling Framework
Keywords: fiber-fluid interaction; Cosserat rod; turbulence modeling; Kolmogorov's energy spectrum; double-velocity correlations; differentiable Gaussian fields
(20 pages, 2005)

Part II: Specific Taylor Drag
Keywords: flexible fibers; $k-\epsilon$ turbulence model; fiber-turbulence interaction scales; air drag; random Gaussian aerodynamic force; white noise; stochastic differential equations; ARMA process
(18 pages, 2005)

82. C. H. Lampert, O. Virjadi
An Optimal Non-Orthogonal Separation of the Anisotropic Gaussian Convolution Filter
Keywords: Anisotropic Gaussian filter, linear filtering, orientation space, nD image processing, separable filters
(25 pages, 2005)

83. H. Andrä, D. Stoyanov
Error indicators in the parallel finite element solver for linear elasticity DDFEM
Keywords: linear elasticity, finite element method, hierarchical shape functions, domain decomposition, parallel implementation, a posteriori error estimates
(21 pages, 2006)

84. M. Schröder, I. Solchenbach
Optimization of Transfer Quality in Regional Public Transit
Keywords: public transit, transfer quality, quadratic assignment problem
(16 pages, 2006)

85. A. Naumovich, F. J. Gaspar
On a multigrid solver for the three-dimensional Biot poroelasticity system in multi-layered domains
Keywords: poroelasticity, interface problem, multigrid, operator-dependent prolongation
(11 pages, 2006)

86. S. Panda, R. Wegener, N. Marheineke
Slender Body Theory for the Dynamics of Curved Viscous Fibers
Keywords: curved viscous fibers; fluid dynamics; Navier-Stokes equations; free boundary value problem; asymptotic expansions; slender body theory
(14 pages, 2006)

87. E. Ivanov, H. Andrä, A. Kudryavtsev
Domain Decomposition Approach for Automatic Parallel Generation of Tetrahedral Grids
Key words: Grid Generation, Unstructured Grid, Delaunay Triangulation, Parallel Programming, Domain Decomposition, Load Balancing
(18 pages, 2006)

88. S. Tiwari, S. Antonov, D. Hietel, J. Kuhnert, R. Wegener
A Meshfree Method for Simulations of Interactions between Fluids and Flexible Structures
Key words: Meshfree Method, FPM, Fluid Structure Interaction, Sheet of Paper, Dynamical Coupling
(16 pages, 2006)

89. R. Ciegis, O. Iliev, V. Starikovicius, K. Steiner
Numerical Algorithms for Solving Problems of Multiphase Flows in Porous Media
Keywords: nonlinear algorithms, finite-volume method, software tools, porous media, flows
(16 pages, 2006)

90. D. Niedziela, O. Iliev, A. Latz
On 3D Numerical Simulations of Viscoelastic Fluids
Keywords: non-Newtonian fluids, anisotropic viscosity, integral constitutive equation
(18 pages, 2006)
91. A. Winterfeld
Application of general semi-infinite Programming to Lapidary Cutting Problems
Keywords: large scale optimization, nonlinear programming, general semi-infinite optimization, design centering, clustering
(26 pages, 2006)
92. J. Orlik, A. Ostrovska
Space-Time Finite Element Approximation and Numerical Solution of Hereditary Linear Viscoelasticity Problems
Keywords: hereditary viscoelasticity; kern approximation by interpolation; space-time finite element approximation, stability and a priori estimate
(24 pages, 2006)
93. V. Rutka, A. Wiegmann, H. Andrä
EJIMM for Calculation of effective Elastic Moduli in 3D Linear Elasticity
Keywords: Elliptic PDE, linear elasticity, irregular domain, finite differences, fast solvers, effective elastic moduli
(24 pages, 2006)
94. A. Wiegmann, A. Zemitis
EJ-HEAT: A Fast Explicit Jump Harmonic Averaging Solver for the Effective Heat Conductivity of Composite Materials
Keywords: Stationary heat equation, effective thermal conductivity, explicit jump, discontinuous coefficients, virtual material design, microstructure simulation, EJ-HEAT
(21 pages, 2006)
95. A. Naumovich
On a finite volume discretization of the three-dimensional Biot poroelasticity system in multilayered domains
Keywords: Biot poroelasticity system, interface problems, finite volume discretization, finite difference method
(21 pages, 2006)
96. M. Krekel, J. Wenzel
A unified approach to Credit Default Swap and Constant Maturity Credit Default Swap valuation
Keywords: LIBOR market model, credit risk, Credit Default Swap, Constant Maturity Credit Default Swap-method
(43 pages, 2006)
97. A. Dreyer
Interval Methods for Analog Circuits
Keywords: interval arithmetic, analog circuits, tolerance analysis, parametric linear systems, frequency response, symbolic analysis, CAD, computer algebra
(36 pages, 2006)
98. N. Weigel, S. Weihe, G. Bitsch, K. Dreßler
Usage of Simulation for Design and Optimization of Testing
Keywords: Vehicle test rigs, MBS, control, hydraulics, testing philosophy
(14 pages, 2006)
99. H. Lang, G. Bitsch, K. Dreßler, M. Speckert
Comparison of the solutions of the elastic and elastoplastic boundary value problems
Keywords: Elastic BVP, elastoplastic BVP, variational inequalities, rate-independency, hysteresis, linear kinematic hardening, stop- and play-operator
(21 pages, 2006)
100. M. Speckert, K. Dreßler, H. Mauch
MBS Simulation of a hexapod based suspension test rig
Keywords: Test rig, MBS simulation, suspension, hydraulics, controlling, design optimization
(12 pages, 2006)
101. S. Azizi Sultan, K.-H. Küfer
A dynamic algorithm for beam orientations in multicriteria IMRT planning
Keywords: radiotherapy planning, beam orientation optimization, dynamic approach, evolutionary algorithm, global optimization
(14 pages, 2006)
102. T. Götz, A. Klar, N. Marheineke, R. Wegener
A Stochastic Model for the Fiber Lay-down Process in the Nonwoven Production
Keywords: fiber dynamics, stochastic Hamiltonian system, stochastic averaging
(17 pages, 2006)
103. Ph. Süss, K.-H. Küfer
Balancing control and simplicity: a variable aggregation method in intensity modulated radiation therapy planning
Keywords: IMRT planning, variable aggregation, clustering methods
(22 pages, 2006)
104. A. Beaudry, G. Laporte, T. Melo, S. Nickel
Dynamic transportation of patients in hospitals
Keywords: in-house hospital transportation, dial-a-ride, dynamic mode, tabu search
(37 pages, 2006)
105. Th. Hanne
Applying multiobjective evolutionary algorithms in industrial projects
Keywords: multiobjective evolutionary algorithms, discrete optimization, continuous optimization, electronic circuit design, semi-infinite programming, scheduling
(18 pages, 2006)
106. J. Franke, S. Halim
Wild bootstrap tests for comparing signals and images
Keywords: wild bootstrap test, texture classification, textile quality control, defect detection, kernel estimate, nonparametric regression
(13 pages, 2007)
107. Z. Drezner, S. Nickel
Solving the ordered one-median problem in the plane
Keywords: planar location, global optimization, ordered median, big triangle small triangle method, bounds, numerical experiments
(21 pages, 2007)
108. Th. Götz, A. Klar, A. Unterreiter, R. Wegener
Numerical evidence for the non-existing of solutions of the equations describing rotational fiber spinning
Keywords: rotational fiber spinning, viscous fibers, boundary value problem, existence of solutions
(11 pages, 2007)
109. Ph. Süss, K.-H. Küfer
Smooth intensity maps and the Bortfeld-Boyer sequencer
Keywords: probabilistic analysis, intensity modulated radiotherapy treatment (IMRT), IMRT plan application, step-and-shoot sequencing
(8 pages, 2007)
110. E. Ivanov, O. Gluchshenko, H. Andrä, A. Kudryavtsev
Parallel software tool for decomposing and meshing of 3d structures
Keywords: a-priori domain decomposition, unstructured grid, Delaunay mesh generation
(14 pages, 2007)
111. O. Iliev, R. Lazarov, J. Willemes
Numerical study of two-grid preconditioners for 1d elliptic problems with highly oscillating discontinuous coefficients
Keywords: two-grid algorithm, oscillating coefficients, preconditioner
(20 pages, 2007)
112. L. Bonilla, T. Götz, A. Klar, N. Marheineke, R. Wegener
Hydrodynamic limit of the Fokker-Planck-equation describing fiber lay-down processes
Keywords: stochastic differential equations, Fokker-Planck equation, asymptotic expansion, Ornstein-Uhlenbeck process
(17 pages, 2007)
113. S. Rief
Modeling and simulation of the pressing section of a paper machine
Keywords: paper machine, computational fluid dynamics, porous media
(41 pages, 2007)
114. R. Ciegis, O. Iliev, Z. Lakdawala
On parallel numerical algorithms for simulating industrial filtration problems
Keywords: Navier-Stokes-Brinkmann equations, finite volume discretization method, SIMPLE, parallel computing, data decomposition method
(24 pages, 2007)
115. N. Marheineke, R. Wegener
Dynamics of curved viscous fibers with surface tension
Keywords: Slender body theory, curved viscous bers with surface tension, free boundary value problem
(25 pages, 2007)
116. S. Feth, J. Franke, M. Speckert
Resampling-Methoden zur mse-Korrektur und Anwendungen in der Betriebsfestigkeit
Keywords: Weibull, Bootstrap, Maximum-Likelihood, Betriebsfestigkeit
(16 pages, 2007)
117. H. Knaaf
Kernel Fisher discriminant functions – a concise and rigorous introduction
Keywords: wild bootstrap test, texture classification, textile quality control, defect detection, kernel estimate, nonparametric regression
(30 pages, 2007)
118. O. Iliev, I. Rybak
On numerical upscaling for flows in heterogeneous porous media

Keywords: numerical upscaling, heterogeneous porous media, single phase flow, Darcy's law, multiscale problem, effective permeability, multipoint flux approximation, anisotropy
(17 pages, 2007)

119. O. Iliev, I. Rybak

On approximation property of multipoint flux approximation method

Keywords: Multipoint flux approximation, finite volume method, elliptic equation, discontinuous tensor coefficients, anisotropy
(15 pages, 2007)

120. O. Iliev, I. Rybak, J. Willems

On upscaling heat conductivity for a class of industrial problems

Keywords: Multiscale problems, effective heat conductivity, numerical upscaling, domain decomposition
(21 pages, 2007)

121. R. Ewing, O. Iliev, R. Lazarov, I. Rybak

On two-level preconditioners for flow in porous media

Keywords: Multiscale problem, Darcy's law, single phase flow, anisotropic heterogeneous porous media, numerical upscaling, multigrid, domain decomposition, efficient preconditioner
(18 pages, 2007)

122. M. Brickenstein, A. Dreyer

POLYBORG: A Gröbner basis framework for Boolean polynomials

Keywords: Gröbner basis, formal verification, Boolean polynomials, algebraic cryptoanalysis, satisfiability
(23 pages, 2007)

123. O. Wirjadi

Survey of 3d image segmentation methods

Keywords: image processing, 3d, image segmentation, binarization
(20 pages, 2007)

124. S. Zeytun, A. Gupta

A Comparative Study of the Vasicek and the CIR Model of the Short Rate

Keywords: interest rates, Vasicek model, CIR-model, calibration, parameter estimation
(17 pages, 2007)

125. G. Hanselmann, A. Sarishvili

Heterogeneous redundancy in software quality prediction using a hybrid Bayesian approach

Keywords: reliability prediction, fault prediction, non-homogeneous poisson process, Bayesian model averaging
(17 pages, 2007)

126. V. Maag, M. Berger, A. Winterfeld, K.-H. Küfer

A novel non-linear approach to minimal area rectangular packing

Keywords: rectangular packing, non-overlapping constraints, non-linear optimization, regularization, relaxation
(18 pages, 2007)

127. M. Monz, K.-H. Küfer, T. Bortfeld, C. Thieke

Pareto navigation – systematic multi-criteria-based IMRT treatment plan determination

Keywords: convex, interactive multi-objective optimization, intensity modulated radiotherapy planning
(15 pages, 2007)

128. M. Krause, A. Scherrer

On the role of modeling parameters in IMRT plan optimization

Keywords: intensity-modulated radiotherapy (IMRT), inverse IMRT planning, convex optimization, sensitivity analysis, elasticity, modeling parameters, equivalent uniform dose (EUD)
(18 pages, 2007)

129. A. Wiegmann

Computation of the permeability of porous materials from their microstructure by FFF-Stokes

Keywords: permeability, numerical homogenization, fast Stokes solver
(24 pages, 2007)

130. T. Melo, S. Nickel, F. Saldanha da Gama

Facility Location and Supply Chain Management – A comprehensive review

Keywords: facility location, supply chain management, network design
(54 pages, 2007)

131. T. Hanne, T. Melo, S. Nickel

Bringing robustness to patient flow management through optimized patient transports in hospitals

Keywords: Dial-a-Ride problem, online problem, case study, tabu search, hospital logistics
(23 pages, 2007)

132. R. Ewing, O. Iliev, R. Lazarov, I. Rybak, J. Willems

An efficient approach for upscaling properties of composite materials with high contrast of coefficients

Keywords: effective heat conductivity, permeability of fractured porous media, numerical upscaling, fibrous insulation materials, metal foams
(16 pages, 2008)

133. S. Gelareh, S. Nickel

New approaches to hub location problems in public transport planning

Keywords: integer programming, hub location, transportation, decomposition, heuristic
(25 pages, 2008)

134. G. Thömmes, J. Becker, M. Junk, A. K. Vai-kuntam, D. Kehrwald, A. Klar, K. Steiner, A. Wiegmann

A Lattice Boltzmann Method for immiscible multiphase flow simulations using the Level Set Method

Keywords: Lattice Boltzmann method, Level Set method, free surface, multiphase flow
(28 pages, 2008)

135. J. Orlik

Homogenization in elasto-plasticity

Keywords: multiscale structures, asymptotic homogenization, nonlinear energy
(40 pages, 2008)

136. J. Almquist, H. Schmidt, P. Lang, J. Deitmer, M. Jirstrand, D. Prätzel-Wolters, H. Becker

Determination of interaction between MCT1 and CAll via a mathematical and physiological approach

Keywords: mathematical modeling; model reduction; electrophysiology; pH-sensitive microelectrodes; proton antenna
(20 pages, 2008)

137. E. Savenkov, H. Andrä, O. Iliev

An analysis of one regularization approach for solution of pure Neumann problem

Keywords: pure Neumann problem, elasticity, regularization, finite element method, condition number
(27 pages, 2008)

138. O. Berman, J. Kalcsics, D. Krass, S. Nickel

The ordered gradual covering location problem on a network

Keywords: gradual covering, ordered median function, network location
(32 pages, 2008)

139. S. Gelareh, S. Nickel

Multi-period public transport design: A novel model and solution approaches

Keywords: Integer programming, hub location, public transport, multi-period planning, heuristics
(31 pages, 2008)

140. T. Melo, S. Nickel, F. Saldanha-da-Gama

Network design decisions in supply chain planning

Keywords: supply chain design, integer programming models, location models, heuristics
(20 pages, 2008)

141. C. Lautensack, A. Särkkä, J. Freitag, K. Schladitz

Anisotropy analysis of pressed point processes

Keywords: estimation of compression, isotropy test, nearest neighbour distance, orientation analysis, polar ice, Ripley's K function
(35 pages, 2008)

142. O. Iliev, R. Lazarov, J. Willems

A Graph-Laplacian approach for calculating the effective thermal conductivity of complicated fiber geometries

Keywords: graph laplacian, effective heat conductivity, numerical upscaling, fibrous materials
(14 pages, 2008)

143. J. Linn, T. Stephan, J. Carlsson, R. Bohlin

Fast simulation of quasistatic rod deformations for VR applications

Keywords: quasistatic deformations, geometrically exact rod models, variational formulation, energy minimization, finite differences, nonlinear conjugate gradients
(7 pages, 2008)

144. J. Linn, T. Stephan

Simulation of quasistatic deformations using discrete rod models

Keywords: quasistatic deformations, geometrically exact rod models, variational formulation, energy minimization, finite differences, nonlinear conjugate gradients
(9 pages, 2008)

145. J. Marburger, N. Marheineke, R. Pinna

Adjoint based optimal control using meshless discretizations

Keywords: Mesh-less methods, particle methods, Eulerian-Lagrangian formulation, optimization strategies, adjoint method, hyperbolic equations
(14 pages, 2008)

146. S. Desmettre, J. Gould, A. Szimayer

Own-company stockholding and work effort preferences of an unconstrained executive

Keywords: optimal portfolio choice, executive compensation
(33 pages, 2008)

147. M. Berger, M. Schröder, K.-H. Küfer
A constraint programming approach for the two-dimensional rectangular packing problem with orthogonal orientations
Keywords: rectangular packing, orthogonal orientations non-overlapping constraints, constraint propagation
(13 pages, 2008)
148. K. Schladitz, C. Redenbach, T. Sych, M. Godehardt
Microstructural characterisation of open foams using 3d images
Keywords: virtual material design, image analysis, open foams
(30 pages, 2008)
149. E. Fernández, J. Kalcsics, S. Nickel, R. Ríos-Mercado
A novel territory design model arising in the implementation of the WEEE-Directive
Keywords: heuristics, optimization, logistics, recycling
(28 pages, 2008)
150. H. Lang, J. Linn
Lagrangian field theory in space-time for geometrically exact Cosserat rods
Keywords: Cosserat rods, geometrically exact rods, small strain, large deformation, deformable bodies, Lagrangian field theory, variational calculus
(19 pages, 2009)
151. K. Dreßler, M. Speckert, R. Müller, Ch. Weber
Customer loads correlation in truck engineering
Keywords: Customer distribution, safety critical components, quantile estimation, Monte-Carlo methods
(11 pages, 2009)
152. H. Lang, K. Dreßler
An improved multiaxial stress-strain correction model for elastic FE postprocessing
Keywords: Jiang's model of elastoplasticity, stress-strain correction, parameter identification, automatic differentiation, least-squares optimization, Coleman-Li algorithm
(6 pages, 2009)
153. J. Kalcsics, S. Nickel, M. Schröder
A generic geometric approach to territory design and districting
Keywords: Territory design, districting, combinatorial optimization, heuristics, computational geometry
(32 pages, 2009)
154. Th. Fütterer, A. Klar, R. Wegener
An energy conserving numerical scheme for the dynamics of hyperelastic rods
Keywords: Cosserat rod, hyperealistic, energy conservation, finite differences
(16 pages, 2009)
155. A. Wiegmann, L. Cheng, E. Glatt, O. Iliev, S. Rief
Design of pleated filters by computer simulations
Keywords: Solid-gas separation, solid-liquid separation, pleated filter, design, simulation
(21 pages, 2009)
156. A. Klar, N. Marheineke, R. Wegener
Hierarchy of mathematical models for production processes of technical textiles
Keywords: radiotherapy planning, path-connected sublevelsets, modified gradient projection method, improving and feasible directions
(14 pages, 2009)
157. E. Glatt, S. Rief, A. Wiegmann, M. Knefel, E. Wegenke
Structure and pressure drop of real and virtual metal wire meshes
Keywords: metal wire mesh, structure simulation, model calibration, CFD simulation, pressure loss
(7 pages, 2009)
158. S. Kruse, M. Müller
Pricing American call options under the assumption of stochastic dividends – An application of the Korn-Rogers model
Keywords: option pricing, American options, dividends, dividend discount model, Black-Scholes model
(22 pages, 2009)
159. H. Lang, J. Linn, M. Arnold
Multibody dynamics simulation of geometrically exact Cosserat rods
Keywords: flexible multibody dynamics, large deformations, finite rotations, constrained mechanical systems, structural dynamics
(20 pages, 2009)
160. P. Jung, S. Leyendecker, J. Linn, M. Ortiz
Discrete Lagrangian mechanics and geometrically exact Cosserat rods
Keywords: special Cosserat rods, Lagrangian mechanics, Noether's theorem, discrete mechanics, frame-indifference, holonomic constraints
(14 pages, 2009)
161. M. Burger, K. Dreßler, A. Marquardt, M. Speckert
Calculating invariant loads for system simulation in vehicle engineering
Keywords: iterative learning control, optimal control theory, differential algebraic equations(DAEs)
(18 pages, 2009)
162. M. Speckert, N. Ruf, K. Dreßler
Undesired drift of multibody models excited by measured accelerations or forces
Keywords: multibody simulation, full vehicle model, force-based simulation, drift due to noise
(19 pages, 2009)
163. A. Streit, K. Dreßler, M. Speckert, J. Lichter, T. Zenner, P. Bach
Anwendung statistischer Methoden zur Erstellung von Nutzungsprofilen für die Auslegung von Mobilbaggern
Keywords: Nutzungsvielfalt, Kundenbeanspruchung, Bemessungsgrundlagen
(13 pages, 2009)
164. I. Correia, S. Nickel, F. Saldanha-da-Gama
Anwendung statistischer Methoden zur Erstellung von Nutzungsprofilen für die Auslegung von Mobilbaggern
Keywords: Capacitated Hub Location, MIP formulations
(10 pages, 2009)
165. F. Yaneva, T. Grebe, A. Scherrer
An alternative view on global radiotherapy optimization problems
Keywords: radiotherapy planning, path-connected sublevelsets, modified gradient projection method, improving and feasible directions
(14 pages, 2009)
166. J. I. Serna, M. Monz, K.-H. Küfer, C. Thieke
Trade-off bounds and their effect in multi-criteria IMRT planning
Keywords: trade-off bounds, multi-criteria optimization, IMRT, Pareto surface
(15 pages, 2009)
167. W. Arne, N. Marheineke, A. Meister, R. Wegener
Numerical analysis of Cosserat rod and string models for viscous jets in rotational spinning processes
Keywords: Rotational spinning process, curved viscous fibers, asymptotic Cosserat models, boundary value problem, existence of numerical solutions
(18 pages, 2009)
168. T. Melo, S. Nickel, F. Saldanha-da-Gama
An LP-rounding heuristic to solve a multi-period facility relocation problem
Keywords: supply chain design, heuristic, linear programming, rounding
(37 pages, 2009)
169. I. Correia, S. Nickel, F. Saldanha-da-Gama
Single-allocation hub location problems with capacity choices
Keywords: hub location, capacity decisions, MILP formulations
(27 pages, 2009)
170. S. Acar, K. Natcheva-Acar
A guide on the implementation of the Heath-Jarrow-Morton Two-Factor Gaussian Short Rate Model (HJM-G2++)
Keywords: short rate model, two factor Gaussian, G2++, option pricing, calibration
(30 pages, 2009)
171. A. Szimayer, G. Dimitroff, S. Lorenz
A parsimonious multi-asset Heston model: calibration and derivative pricing
Keywords: Heston model, multi-asset, option pricing, calibration, correlation
(28 pages, 2009)
172. N. Marheineke, R. Wegener
Modeling and validation of a stochastic drag for fibers in turbulent flows
Keywords: fiber-fluid interactions, long slender fibers, turbulence modelling, aerodynamic drag, dimensional analysis, data interpolation, stochastic partial differential algebraic equation, numerical simulations, experimental validations
(19 pages, 2009)
173. S. Nickel, M. Schröder, J. Steeg
Planning for home health care services
Keywords: home health care, route planning, meta-heuristics, constraint programming
(23 pages, 2009)
174. G. Dimitroff, A. Szimayer, A. Wagner
Quanto option pricing in the parsimonious Heston model
Keywords: Heston model, multi asset, quanto options, option pricing
(14 pages, 2009)
174. G. Dimitroff, A. Szimayer, A. Wagner
Quanto option pricing in the parsimonious Heston model
Keywords: Heston model, multi asset, quanto options, option pricing
(14 pages, 2009)
175. S. Herkt, K. Dreßler, R. Pinna
Model reduction of nonlinear problems in structural mechanics
Keywords: flexible bodies, FEM, nonlinear model reduction, POD
(13 pages, 2009)

176. M. K. Ahmad, S. Didas, J. Iqbal
Using the Sharp Operator for edge detection and nonlinear diffusion
Keywords: maximal function, sharp function, image processing, edge detection, nonlinear diffusion
(17 pages, 2009)
177. M. Speckert, N. Ruf, K. Dreßler, R. Müller, C. Weber, S. Weihe
Ein neuer Ansatz zur Ermittlung von Erprobungslasten für sicherheitsrelevante Bauteile
Keywords: sicherheitsrelevante Bauteile, Kundenbeanspruchung, Festigkeitsverteilung, Ausfallwahrscheinlichkeit, Konfidenz, statistische Unsicherheit, Sicherheitsfaktoren
(16 pages, 2009)
178. J. Jegorovs
Wave based method: new applicability areas
Keywords: Elliptic boundary value problems, inhomogeneous Helmholtz type differential equations in bounded domains, numerical methods, wave based method, uniform B-splines
(10 pages, 2009)
179. H. Lang, M. Arnold
Numerical aspects in the dynamic simulation of geometrically exact rods
Keywords: Kirchhoff and Cosserat rods, geometrically exact rods, deformable bodies, multibody dynamics, artial differential algebraic equations, method of lines, time integration
(21 pages, 2009)
180. H. Lang
Comparison of quaternionic and rotation-free null space formalisms for multibody dynamics
Keywords: Parametrisation of rotations, differential-algebraic equations, multibody dynamics, constrained mechanical systems, Lagrangian mechanics
(40 pages, 2010)
181. S. Nickel, F. Saldanha-da-Gama, H.-P. Ziegler
Stochastic programming approaches for risk aware supply chain network design problems
Keywords: Supply Chain Management, multi-stage stochastic programming, financial decisions, risk
(37 pages, 2010)
182. P. Ruckdeschel, N. Horbenko
Robustness properties of estimators in generalized Pareto Models
Keywords: global robustness, local robustness, finite sample breakdown point, generalized Pareto distribution
(58 pages, 2010)
183. P. Jung, S. Leyendecker, J. Linn, M. Ortiz
A discrete mechanics approach to Cosserat rod theory – Part 1: static equilibria
Keywords: Special Cosserat rods; Lagrangian mechanics; Noether's theorem; discrete mechanics; frame-indifference; holonomic constraints; variational formulation
(35 pages, 2010)
184. R. Eymard, G. Printypar
A proof of convergence of a finite volume scheme for modified steady Richards' equation describing transport processes in the pressing section of a paper machine
Keywords: flow in porous media, steady Richards' equation, finite volume methods, convergence of approximate solution
(14 pages, 2010)
185. P. Ruckdeschel
Optimally Robust Kalman Filtering
Keywords: robustness, Kalman Filter, innovation outlier, additive outlier
(42 pages, 2010)
186. S. Repke, N. Marheineke, R. Pinna
On adjoint-based optimization of a free surface Stokes flow
Keywords: film casting process, thin films, free surface Stokes flow, optimal control, Lagrange formalism
(13 pages, 2010)
187. O. Iliev, R. Lazarov, J. Willems
Variational multiscale Finite Element Method for flows in highly porous media
Keywords: numerical upscaling, flow in heterogeneous porous media, Brinkman equations, Darcy's law, subgrid approximation, discontinuous Galerkin mixed FEM
(21 pages, 2010)
188. S. Desmettre, A. Szymayer
Work effort, consumption, and portfolio selection: When the occupational choice matters
Keywords: portfolio choice, work effort, consumption, occupational choice
(34 pages, 2010)
189. O. Iliev, Z. Lakdawala, V. Starikovicius
On a numerical subgrid upscaling algorithm for Stokes-Brinkman equations
Keywords: Stokes-Brinkman equations, subgrid approach, multiscale problems, numerical upscaling
(27 pages, 2010)
190. A. Latz, J. Zausch, O. Iliev
Modeling of species and charge transport in Li-Ion Batteries based on non-equilibrium thermodynamics
Keywords: lithium-ion battery, battery modeling, electrochemical simulation, concentrated electrolyte, ion transport
(8 pages, 2010)
191. Status quo: July 2010
